“ASUHAN KEPERAWATAN PADA CHRONIC KIDNEY DISEASE (CKD) ON HD DI RUANG PERAWATAN PENYAKIT DALAM PAVILIUM SERUNI RUMAH SAKIT RSUD KABUPATEN TANGERANG”

Xiv + 5 Bab + 105 halaman + 29 Tabel

ABSTRAK

Chronic Kidney disease (CKD) merupakan 10 penyakit terbesar diruang perawatan penyakit dalam paviliun seruni Tujuan studi kasus ini mampu melakukan asuhan keperawatan dengan *Chronic Kidney Disease* dengan pendekatan proses keperawatan. Hasil pengkajian usia, pendidikan, agama. Masalah keperawatan antara lain kelebihan volume cairan, perubahan pola nafas, resiko ketidakseimbangan nutrisi kurang dari kebutuhan tubuh, ketidakefektifan perfusi jaringan, intoleransi aktivitas, resiko gangguan pertukaran gas, perubahan integritas kulit. Intervensi yang dilakukan pada studi kasus dari ke-5 klien *Chronic Kidney Disease* sesuai masalah keperawatan yang ditemukan pada klien dengan mengatasi masalah volume cairan, pola nafas, nutrisi dan integritas kulit. Implementasi keperawatan dilakukan sesuai dengan intervensi yang telah disusun tindakan mandiri maupun kolaboratif hasil evaluasi yang didapat selama dilakukan implementasi keperawatan hanya sebagian yang teratasi dengan masalahnya, sebagian kecil tidak teratasi. Hasil studi kasus ini dengan melakukan teknik kumur-kumur dengan obat kumur rasa mint untuk mengurangi rasa haus pada klien dengan *Chronic Kidney Disease*. Kesimpulan didapatkan ada pengaruh kumur-kumur dengan obat kumur rasa mint terhadap perubahan rasa haus pada pasien CKD. disarankan sebaiknya perawat meningkatkan pengetahuan dan keterampilan tentang proses keperawatan untuk memenuhi pelayanan kepada pasien agar maksimal dengan mengikuti pelatihan dan workshop, perawat meningkatkan kemampuan dalam fungsi penyuluhan atau pendidikan kesehatan.

ABSTRACT

Chronic Kidney disease (CKD) is the 10 largest diseases in the treatment of diseases in pavilions seruni The purpose of this case study is able to perform nursing care with Chronic Kidney Disease with nursing process approach. Results of assessment of age, education, religion. Nursing problems include excess fluid volume, changes in breath pattern, risk of nutritional imbalance less than body requirements, ineffectiveness of tissue perfusion, activity intolerance, risk of gas exchange disruption, changes in skin integrity. Interventions were conducted on case studies of the 5 Chronic Kidney Disease clients according to the nursing problems found in clients by resolving fluid volume, breath pattern, nutrition and skin integrity. Implementation of nursing performed in accordance with interventions that have been prepared independent actions and collaborative evaluation results obtained during the implementation of nursing only partially solved by the problem, a small part not resolved. The results of this case study by performing a gargle-mouth rinse technique with mint flavor to reduce thirst on the client with Chronic Kidney Disease. The conclusion was that there was a gargle effect with mouthwash of mint flavor on the change of thirst in CKD patients. it is advisable that nurses should improve their knowledge and skills about the nursing process to fulfill the service to the patients maximally by attending training and workshops, nurses improve their ability in extension function or health education.
