Program Study: Public Health

Judul : Analysis of Implementation of Solid Medical Waste Management at Puskesmas Pondok Jagung 2017

6 CHAPTER, 120 PAGE, 2 TABLES, 4 APPENDIX

Center for Public Health (PUSKESMAS) is one of the health service units in its activities to produce medical waste and non-medical waste either in solid or liquid form. . The solid medical waste of Pondok Jagung Puskesmas has not been well managed. Most of the management of infectious waste does not meet the requirements hence it is deemed necessary to do related research to see the extent of solid waste medical management at Puskesmas Pondok Jagung. This research aims to know the description of SOP factor, facility factor and HR factor in solid medical waste management at Puskesmas Pondok Jagung in 2017. This research type is descriptive qualitative. The research instrument uses observation sheets and in-depth interviews. The result of the research shows that Puskesmas Pondok Jagung SOP has been run well, while the existing facilities are not maximal because incinerator is damaged. Existing human resources work well and use PPE. Solid medical waste management from sorting, collecting, transporting to temporary shelters. The obstacles faced are temporary shelters whose condition is not suitable so that the waste accumulate and cause the smell and incinerator damaged.

Keywords : Waste Management, Solid Medical Waste, *Incinerator*
