Keyword : Hubungan Pelaksanaan Personal Hygiene Oleh Perawat; Tingkat Kepuasan Pasien Imobilisasi

Description :

Personal hygiene is an act to maintain the cleanliness and health of a person for physical and psychological well-being. Satisfaction can be defined as a feeling of satisfaction, a sense of pleasure and relief because someone consumes a product or service to obtain services of a service. The purpose of this study was to determine Relationship Between Implementation of Personal Hygiene by Nurse and Patient Satisfaction Immobilization on the 5th floor of Surgery Gatot Subroto Army Hospital in Central Jakarta. research methods using descriptive analytic approach to the study (cross-sectional), engineering sampling and sample saturated respondents were 40 patients taken 38 patients
immobilization in ambulatory surgical army hospital on the 5th floor. Variable implementation of personal relationships hygiene by nurse and patient satisfaction levels measured immobilisan in age, gender and education, statistical test used was a Chi-Square hypotheses. The results showed that of the 22 respondents who are less well hygienenya personal execution, note 15 respondents (68.2%) are dissatisfied and 7 respondents (31.8%) are satisfied. While of 16 respondents are implementing good personal hygienenya, note 3 respondents (18.8%) did not satisfied and 13 respondents (81.3%) are satisfied. So it shows a significant relationship between the implementation of personal hygiene and immobilization of the patient satisfaction level p value = 0.007 (<\(\alpha\) = 0.05 level). Conclusion that efforts to improve patient satisfaction immobilization will improve the implementation of personal hygiene by hospital nurses in Army Hospital Gatot Subroto, Central Jakarta.
