

Lamp.3a. Hasil t-Test Terhadap Persepsi Responden

$$\bar{X} = 63,8 \quad \mu = 0,5 \text{ (dari nilai ideal)} \quad S = 7,3045 \quad n = 150$$

$$t = \frac{63,8 - 75}{7,30/\sqrt{150}} = \frac{-11,2}{0,596} = -18,790$$

$$t \text{ tabel } (0,01 : 149) = 2,3541$$

$$t \text{ hitung } < t \text{ tabel}$$
