**Kusmajadi Moch Musa “ Analisis About Education Relationship and Technical Treaning of Vehicle PeriodicExamination with Job Achievement of case study Examiner on Transportation Service of Bandung City “ under Izuddin Kartamulia, Ph.D as the guidance.**

The Development transportation is creasing everyday as the need in supporting the establishment which getting greater, bring the consequences that the number of vechide also in crease, but hasn'tbeen balanced with good road infrastructure. Those condition can we see together that negative impact which was brought about is increasing like accident level, road damage and pollution increases.

One of the effort to maximize the use and negative impact which is caused by vehicle, according to legislated regulation is done a construction on vehide through testing. To achieve on optimal examination result certainly the institute who had the authority in these case make en effort to do performance developments in examination service including human aspect which have an important role in determining the examination program.

Education and treaning are the main target which is given by enstitute to all employees to increase their job. This reaserch is proposed to obtain a deep understanding of job achievement of vehicle examiner who has followed Education and treaning of vehicle Technical Examnination in Transportation service of Bandung City.

This research in done to 193 respondent of Employee in transportation service of Bandung City through quisonere and interview. That research result indicate that there is a significant interaction between job achievement based on knowledge, skill and behaviour aspect with the education and treaning technical examination to vehicle examiner in Bandung City. So it can be stated that education and treaning vehicle examination programs give impact to increase job achievement for vehicle examiner so that they become more ready to do their tasks.
