Definisi Operasional Variabel

A. Tabel Detail Definisi Operasional Variabel

Variabel	Dimensi	Definisi Operasional	Indikator	Butir Pernyataan Kuesioner
Service quality (Kualitas Pelayanan). (Parasuraman, 1988).	Reliability/ Keandalan.	Kemampuan memberikan pelayanan yang dijanjikan dengan segera, akurat dan memuaskan. (Parasuraman, 1988).	1. Providing services promised. (Parasuraman, 1988). Menyediakan layanan yang dijanjikan.	1. RS EMC Sentul memberikan layanan sesuai dengan yang dijanjikan.
			2. Dependability in handling customers service problem. (Parasuraman, 1988). Dapat menangani masalah pelayanan.	2. RS EMC Sentul mampu melayani keluhan pasien.
			3. Perfoming service right the first time. (Parasuraman, 1988). Keakuratan dalam memberikan pelayanan.	3. RS EMC Sentul memberikan layanan yang tepat sejak awal.

Variabel	Dimensi	Definisi Operasional	Indikator	Butir Pernyataan Kuesioner
			4. Providing service at the promised time. (Parasuraman, 1988). Memberikan pelayanan pada waktu yang dijanjikan.	4. RS EMC Sentul memberikan pelayanan pada waktu yang dijanjikan.
	Responsiveness/ Daya Tanggap.	Keinginan para staf dan karyawan untuk membantu para pasien dan memberikan pelayanan yang tanggap. (Parasuraman, 1988).	5. Maintaining error – free record. (Parasuraman, 1988). Memperbaiki dan menghindari kesalahan dalam pelayanan.	5. RS EMC Sentul menjamin tidak ada kesalahan dalam pencatatan pelayanan pasien.
			6. Keeping customers informed about when service will be performed. (Parasuraman, 1988). Memberikan informasi waktu pelayanan akan dilakukan.	6. Petugas RS EMC Sentul selalu memberikan informasi tentang kapan layanan akan diberikan.
			7. Prompt service to customers. (Parasuraman, 1988).	7. Pasien mendapatkan pelayanan yang cepat di RS EMC Sentul.

Variabel	Dimensi	Definisi Operasional	Indikator	Butir Pernyataan Kuesioner
			Pemberitahuan segera untuk informasi terhadap jadwal pelayanan yang diberikan.	
			8. Willingness to help customers. (Parasuraman, 1988). Kesediaan untuk membantu pasien.	8. Petugas RS EMC Sentul selalu bersedia untuk membantu pasien.
			9. Readiness to respond to customers request. (Parasuraman, 1988). Kesiapan untuk menanggapi permintaan pasien.	9. Petugas RS EMC Sentul selalu tanggap terhadap kebutuhan pasien.
	Assurance/Jaminan.	Kemampuan untuk melahirkan kepercayaan dan keyakinan pada diri pasien. (Parasuraman, 1988).	10. Employess who instill confidence in customers. (Parasuraman, 1988). Karyawan dapat menanamkan kepercayaan kepada pasien.	10. Petugas RS EMC Sentul mampu menanamkan kepercayaan kepada pasien
			11. Making customers feel	11. RS EMC Sentul memberikan rasa aman dalam

Variabel	Dimensi	Definisi Operasional	Indikator	Butir Pernyataan Kuesioner
			safe in their transaction. (Parasuraman, 1988). Membuat pasien merasa aman dalam transaksi mereka.	pelayanannya kepada pasien.
			12. Employess who are consistently courteous. (Parasuraman, 1988). Keramahan dan kesopanan petugas dalam memberikan Pelayanan.	12. Petugas RS EMC Sentul selalu bersikap sopan.
			13. Employees who have the knowledge to answer customer question. (Parasuraman, 1988). Karyawan yang memiliki pengetahuan untuk menjawab pertanyaan pasien.	13. Petugas RS EMC Sentul memiliki pengetahuan yang baik untuk menjawab pertanyaan pasien.
	Empathy/ Empati.	Aspek yang menekankan pada perlakuan pasien sebagai	14. Giving Customer Individual attention.	14. RS EMC Sentul memberikan perhatian secara

Variabel	Dimensi	Definisi Operasional	Indikator	Butir Pernyataan Kuesioner
		individu. (Parasuraman, 1988).	(Parasuraman, 1988). Memberikan perhatian kepada setiap pasien.	khusus kepada setiap pasien.
			15.Employess who deal with customers in a caring fashion. (Parasuraman, 1988). Memahami apa yang dibutuhkan pasien.	15. Petugas RS EMC Sentul peduli terhadap keinginan pasien.
			16.Having the customers best interest at heart. (Parasuraman, 1988). Melayani pasien dengan sepenuh hati.	16. RS EMC Sentul memberikan pelayannan yang menyenangkan hati pasien.
			17.Employees who understand the needs of their customers. (Parasuraman, 1988). Karyawan yang memahami kebutuhan pasien mereka.	17. Petugas RS EMC Sentul memahami kebutuhan pasien.
	Tangibles/ Bukti Fisik.	Penampilan fisik,	18.Convenient business hours.	18. RS EMC Sentul beroperasional

Variabel	Dimensi	Definisi Operasional	Indikator	Butir Pernyataan Kuesioner
		perlengkapan, pegawai dan sarana komunikasi. (Parasuraman, 1988).	(Parasuraman, 1988). Ketersediaan Jam pelayanan yang baik.	dalam jam pelayanan yang nyaman
			19.Modern equipment. (Parasuraman, 1988). Memiliki peralatan yang modern.	19. RS EMC Sentul memiliki peralatan medis yang modern / up to date.
			20.Visually appealing facilities. (Parasuraman, 1988). Ruang tunggu dan fasilitas perlengkapan nyaman dan menunjang.	20. Fasilitas RS EMC Sentul tampak menarik dan nyaman.
			21.Employees who have neat, professional appearance. (Parasuraman, 1988). Penampilan karyawan rapi dan bersih/professional.	21. Karyawan RS EMC Sentul berpenampilan rapi, bersih dan professional.
			22.Visually appealing	22. RS EMC Sentul mempunyai

Variabel	Dimensi	Definisi Operasional	Indikator	Butir Pernyataan Kuesioner
			<p>materials associated with the service. (Parasuraman, 1988).</p> <p>Tampilan fisik yang menarik dalam pelayanan.</p>	<p>peralatan yang baik terkait dengan pelayanan terhadap pasien.</p>
Customer satisfaction (Kepuasan Pelanggan) (Oliver, 1997).		Kepuasan pasien adalah perasaan yang dialami seseorang ketika membandingkan apa yang menjadi harapannya dengan kenyataan yang didapatkan. (Kotler, P. & Keller, 2009)	<p>23.Decision to choose. (Oliver, 1997). Keputusan untuk memilih</p>	<p>23.Saya senang dengan keputusan saya memilih RS EMC Sentul sebagai RS langganan saya.</p>
			<p>24.Making right decision. (Oliver, 1997). Melakukan yang tepat.</p>	<p>24. Saya yakin bahwa saya telah melakukan hal yang benar ketika memilih RS EMC Sentul sebagai RS pilihan saya.</p>
			<p>25.Overall satisfaction. (Oliver, 1997).</p>	<p>25.Secara keseluruhan saya puas dengan pelayanan di RS EMC Sentul.</p>

Variabel	Dimensi	Definisi Operasional	Indikator	Butir Pernyataan Kuesioner
			Kepuasan secara umum.	
Word Of Mouth. (Syah, 2014).		Mengukur kebersediaan pelanggan untuk merekomendasikan kepada pelanggan lainnya.	26. Would always recommend (Syah, 2014). Selalu merekomendasikan	26. Saya akan selalu merekomendasikan RS EMC Sentul kepada seseorang yang meminta saran saya.
				27. Saya akan menceritakan hal-hal baik mengenai Rumah Sakit EMC Sentul.
				28. Saya senang apabila ada teman maupun keluarga saya yang juga berlanggan di Rumah Sakit EMC Sentul.

B. Tabel Kisi-kisi Instrumen Penelitian (Kuesioner Penelitian)

Variabel Penelitian	Dimensi	No. Item
Service quality (Kualitas Pelayanan). (Parasuraman, 1988).	Tangibles (fasilitas nyata / bukti langsung secara fisik)	1,2,3,4
	Reliability (Keandalan)	5,6,7,8,9
	Responsiveness (Daya Tanggap)	10,11,12,13
	Assurance (Jaminan)	14,15,16,17
	Empathy (Empati)	18,19,20,21,22
Customer satisfaction (Kepuasan Pelanggan). (Oliver, 1997).	Decision to choose (Keputusan untuk memilih)	23
	Making right decision (Melakukan pengambilan keputusan yang tepat)	24
	Overall satisfaction (Kepuasan secara umum)	25
Word of Mouth (Rekomendasi dari mulut ke mulut). (Syah, 2014).	Word of Mouth (Rekomendasi dari mulut ke mulut)	26,27,28

Teknik pembuatan skala dalam penelitian ini termasuk dalam skala *Likert* yaitu berhubungan dengan pernyataan tentang sikap seseorang terhadap sesuatu yang terdiri dari 5 tingkatan: 1. Skor 5 untuk jawaban Sangat Setuju (SS). 2. Skor 4 untuk jawaban Setuju (S). 3. Skor 3 untuk jawaban Antara Setuju dan Tidak Setuju (ASTS). 4. Skor 2 untuk jawaban Tidak Setuju (TS). 5. Skor 1 untuk jawaban Sangat Tidak Setuju (STS) (Sugiyono, 2011).

C. Penjabaran Instrumen Kuesioner

Service Quality / Kualitas Pelayanan (Parasuraman, 1988).				
No.	Dimension	Originale	Translate	Context
1.	<i>Tangibles</i> (fasilitas nyata/bukti langsung).	XYZ has up to date equipment.	XYZ memiliki peralatan terkini.	RS EMC Sentul memiliki peralatan medis yang modern.
2.		XYZ physical facilities are visually appealing.	Fasilitas fisik XYZ menarik secara visual.	Fasilitas RS EMC Sentul tampak nyaman.
3.		XYZ employees are well dressed and appear neat	Karyawan XYZ berpakaian bagus dan tampak rapi.	Petugas RS EMC Sentul berpenampilan rapi.
4.		The appearance of the physical facilities of XYZ is in keeping with the type of services provided.	Tampilan fasilitas fisik XYZ sesuai dengan jenis layanan yang disediakan.	RS EMC Sentul mempunyai fasilitas peralatan yang baik, sesuai dengan jenis pelayanan yang disediakan terhadap pasien.
5.		When XYZ promise to do something by a certain time, it does so.	Ketika XYZ berjanji untuk melakukan sesuatu pada waktu tertentu, ia melukukannya.	Ketika RS EMC Sentul berjanji untuk memberikan pelayanan pada waktu tertentu, RS EMC Sentul melakukan apa yang dijanjikannya.
6.		When you have problem, XYZ is sympathetic and reassuring.	Ketika Anda memiliki masalah, XYZ bersympati dan meyakinkan.	Ketika Anda memiliki masalah, RS EMC Sentul bersympati.
7.		XYZ is dependable.	XYZ bisa diandalkan	RS EMC Sentul bisa diandalkan.
8.		XYZ provide its services at the time they promise to do so.	XYZ menyediakan layanannya pada saat mereka	RS EMC Sentul memberikan pelayanan pada waktu yang dijanjikan

Service Quality / Kualitas Pelayanan (Parasuraman, 1988).				
No.	Dimension	Originale	Translate	Context
			berjanji untuk melakukannya.	
9.		XYZ keep its records accurately.	XYZ menyimpan catatannya secara akurat.	RS EMC Sentul menyimpan catatan rekam medis pasiennya secara akurat.
10.	<i>Responsiveness</i> (Kesigapan).	XYZ does not tell customers exactly when services will be performed. (-)	XYZ tidak memberi tahu pelanggan kapan layanan akan dilakukan. (-)	RS EMC Sentul tidak memberitahukan kepada pasien, mengenai kapan layanan medis akan dilakukan. (-)
11.		You do not receive prompt services from XYZ's employees. (-)	Anda tidak menerima layanan cepat dari karyawan XYZ. (-)	Anda tidak menerima pelayanan yang cepat dari petugas RS EMC Sentul.(-)
12.		Employees of XYZ are not always willing to help customers. (-)	Karyawan XYZ tidak selalu bersedia membantu pelanggan. (-)	Petugas RS EMC Sentul tidak selalu bersedia membantu pasien. (-)
13.		Employees if XYZ are too busy to respond to customer requests promptly. (-)	Karyawan jika XYZ terlalu sibuk untuk menanggapi permintaan pelanggan dengan segera. (-)	Jika petugas RS EMC Sentul terlalu sibuk, Petugas tersebut tidak bisa menanggapi permintaan pasien dengan segera. (-)
14.	<i>Assurance</i> (Kepastian/jaminan).	You can trust employees of XYZ.	Anda dapat mempercayai karyawan XYZ.	Petugas RS EMC Sentul mampu menanamkan kepercayaan kepada pasien
15.		You feel safe in your transactions	Anda merasa aman dalam bertransaksi	Petugas RS EMC Sentul memberikan rasa aman dalam melakukan

Service Quality / Kualitas Pelayanan (Parasuraman, 1988).				
No.	Dimension	Originale	Translate	Context
	<i>Emphaty</i> (Empati).	with XYZ' employees.	dengan karyawan XYZ.	transaksi pelayanannya kepada pasien.
16.		Employees of XYZ are polite.	Karyawan XYZ bersikap sopan.	Petugas RS EMC Sentul selalu bersikap sopan.
17.		Employees get adequate support from XYZ to do their jobs well.	Karyawan mendapat dukungan yang memadai dari XYZ untuk melakukan pekerjaannya dengan baik.	Petugas RS EMC Sentul mendapat dukungan yang memadai dari RS EMC Sentul untuk melakukan pekerjaannya dengan baik.
18.		XYZ do not give you personal attention. (-)	XYZ tidak memberi Anda perhatian pribadi. (-)	RS EMC Sentul tidak memberikan perhatian secara khusus (pribadi) kepada setiap pasien. (-)
19.		Employees of XYZ do not give you personal attention. (-)	Karyawan XYZ tidak memberi Anda perhatian pribadi. (-)	Petugas RS EMC Sentul tidak memberikan perhatian secara khusus (pribadi) kepada setiap pasien. (-)
20.		Employees of XYZ do not know what your needs are.(-)	Karyawan XYZ tidak tahu apa kebutuhan Anda. (-)	Petugas RS EMC Sentul tidak peduli terhadap kebutuhan pasien. (-)
21.		XYZ does not have your best interests at heart. (-)	XYZ tidak memiliki kepentingan terbaik di hati Anda. (-)	RS EMC Sentul tidak memberikan pelayanan yang menyenangkan hati pasien. (-)
22.		XYZ does not have operating hours convenient to all their customers. (-)	XYZ tidak memiliki jam operasional yang nyaman bagi	RS EMC Sentul tidak memiliki jam operasional yang nyaman bagi semua pasien mereka. (-)

Service Quality / Kualitas Pelayanan (Parasuraman, 1988).				
No.	Dimension	Originale	Translate	Context
			semua pelanggan mereka. (-)	
Customer satisfaction / Kepuasan Pelanggan (Cheng, 2008)				
23.	Decision to choose (Keputusan untuk memilih).	I am happy about my decision to choose this ISP.	Saya senang dengan keputusan saya untuk memilih ISP ini.	Saya senang dengan keputusan saya memilih RS EMC Sentul sebagai RS langganan saya.
24.	Making right decision (Membuat keputusan yang benar).	I believe that I did the right thing when I chose this ISP.	Saya percaya bahwa saya melakukan hal yang benar ketika saya memilih ISP ini.	Saya percaya bahwa saya telah melakukan hal yang benar ketika memilih RS EMC Sentul sebagai RS pilihan saya.
25.	Overall satisfaction (Kepuasan secara menyeluruh).	Overall, I am satisfied with this ISP.	Secara keseluruhan, saya puas dengan ISP ini.	Secara keseluruhan, saya puas dengan pelayanan di RS EMC Sentul.
Word of Mouth (Rekomendasi dari mulut ke mulut) (Syah, 2014).				
26.	Word of Mouth (Rekomendasi dari mulut ke mulut)	Mengukur kebersediaan pelanggan untuk merekomendasikan kepada pelanggan lainnya	Mengukur kebersediaan pelanggan untuk merekomendasikan kepada pelanggan lainnya	Saya akan selalu merekomendasikan RS EMC Sentul kepada seseorang yang meminta saran saya.
27.				Saya akan menceritakan hal-hal baik mengenai Rumah Sakit EMC Sentul.
28.				Saya senang apabila ada teman maupun keluarga saya yang juga berlangganan di Rumah Sakit EMC Sentul.

Customer satisfaction (Kepuasan Pelanggan). (Oliver, 1997).	Decision to choose (Keputusan untuk memilih)	23		
	Making right decision (Melakukan pengambilan keputusan yang tepat)	24	0,696	0,890

Variabel Penelitian	Dimensi	No. Item	Kaiser-Meyer-Olkin (KMO)	Alpha Chonbach's
	Overall satisfaction (Kepuasan secara umum)	25		
Customer Loyality (Loyalitas pelanggan). (Syah, 2014).	Word of Mouth (Rekomendasi dari mulut ke mulut)	26 27 28	0,720	0,855

Teknik pembuatan skala dalam penelitian ini termasuk dalam skala *Likert* yaitu berhubungan dengan pernyataan tentang sikap seseorang terhadap sesuatu yang terdiri dari 5 tingkatan: 1. Skor 5 untuk jawaban Sangat Setuju (SS). 2. Skor 4 untuk jawaban Setuju (S). 3. Skor 3 untuk jawaban Antara Setuju dan Tidak Setuju (ASTS). 4. Skor 2 untuk jawaban Tidak Setuju (TS). 5. Skor 1 untuk jawaban Sangat Tidak Setuju (STS) (Sugiyono, 2011). Untuk hasil uji validitas dan reliabilitas diatas dengan menghilangkan pertanyaan no.3 dan no.6, sehingga hanya didapatkan 26 pertanyaan kuesioner yang telah dinyatakan valid dan reliable dan dari hasil uji ini akan dilakukan numerasi ulang sesuai urutan pertanyaan instrument kuesioner.

Abstract

This research examines the effect of service quality and customer satisfaction on word of mouth. We carried out a survey of our sample, which consisted of 303 respondents. This study provides empirical evidence that service quality has a significant positive effect on customer satisfaction, service quality also has a significant positive effect on word of mouth and customer satisfaction has a significant positive effect on word of mouth.

Keywords: service quality, customer satisfaction, word of mouth.

INTRODUCTION

The rapid development of the medical environment at the local and global level has encouraged hospitals to implement various changes. The medical industry in general is progressive, more productive, and developing quickly, along with the rapid improvements in medical science and technology (Kulsum & Syah, 2017). Given the changes that tend to accelerate with the emergence of various new government policies, technology, the economy, consumer behavior, market growth, competitor strategies, and other factors that result in a more competitive situation, then the right strategy is needed to manage the healthcare services offered by hospitals. Hospitals are in the healthcare service business, based on the principle of trust from their customers. Thus, service quality, customer satisfaction, and word of mouth determine the success of a hospital's business.

Health care is a dynamic and rapidly growing public service market sector that faces increasing competition and significant changes (Dagger, 2007). The quality of service is identical to how good or bad the offerings are, which are provided by service companies to satisfy the consumers by providing or delivering services which exceed the consumers' expectations (Lovelock, 2002). Customer satisfaction is considered to be a feeling of happiness or disappointment for the customers, which comes from their comparison between the performance or results of a service or product, and their expectations of it, where the context of customer satisfaction is an estimate, or customer confidence in what they receive. In other words, customer satisfaction is the quality of service as determined by the opinions of the consumers (Kotler & Keller, 2009).

Product or service quality is one of the keys to success in competition. The quality of products and services provided by a company will affect the company's reputation in the eyes of consumers, and will ultimately affect the consumers' loyalty to the company (Syah, 2013). In hospitals, improved service quality is related to patient satisfaction, so if there is an increase in the services received by patients, and the patients' satisfaction

increases, this will have an impact on the patients' loyalty (Nurlitasari & Syah, 2016). Service quality is a key factor to get customer satisfaction that will increase customer loyalty (Ajami *et al.*, 2018).

Customer loyalty includes the attitude component and the customer behavior component, which is related to a customer's attitude, which is reflected in the intention to return to buy the product, the willingness to recommend the company to others (word of mouth), not to move to other products and be willing to pay a price premium (Anselmsson *et al.*, 2014). Research by Yu *et al.* (2017) examined site-level (website quality and interactivity) and consumer-level (satisfaction, attitude, stickiness) values, but the study did not examine any hedonic value variables as one of the antecedents that affect word of mouth.

Word of mouth refers to informal communications between individuals about ownership, use, and certain characteristics of goods and services, sellers, services, and social issues (Yu *et al.*, 2017). Generating positive word of mouth is an important marketing strategy for online businesses because it can significantly influence consumers' purchasing decisions (Smith *et al.*, 2007). Dissatisfaction often results in customers going out or spreading negative feedback through word of mouth (Lai & Chou, 2015). However, if the right service recovery strategy is applied, then positive confirmation from customers can be achieved, so as to turn dissatisfied customers into satisfied and loyal customers who spread positive messages by word of mouth (Lankton & McKnight, 2012).

The quality of service has a very significant influence on word of mouth (Mukerjee, 2018). Trusov (2000) said that communicating by word of mouth is more influential than communication through other promotional methods. Customers who are very satisfied with certain products or services will have the enthusiasm to introduce those products or services through word of mouth to anyone they know (Griffin, 2003). Customers who get products or services that meet or exceed expectations, tend to give a positive response to the company, one of them, giving word of mouth to his colleagues. Word of mouth is an effective way to build a positive image for a hospital, besides the fact that word of mouth can also increase the number of purchases and sales (Handini & Ruswanti, 2016). It has been established that high service quality provides benefits, which include customer satisfaction and positive word of mouth communications (Ilyas *et al.*, 2013).

Based on research conducted by Susanto (2018), Ajami *et al.* (2018), Zaim *et al.* (2013) and Bakti (2013), service quality is related to customer satisfaction, which will lead to customer loyalty. Meanwhile, customer loyalty has three dimensions, namely: word of mouth, switching behavior, and product repurchase. However, in today's rapidly developing digital era, one thing that is very important for maintaining customer loyalty is word of mouth, which will be the focus of this research, because, in terms of services, hospitals provide services in a people-to-people manner. So through positive word of mouth a hospital's business will grow faster or, if the word of mouth is negative it will worsen.

From the background description above, the objectives of the research are: (1) To find out the relationship between service quality and patients' satisfaction in a hospital in Indonesia. (2) To find out the relationship between service quality and word of mouth in a hospital in Indonesia. (3) To find out the relationship between patient satisfaction and word of mouth in a hospital in Indonesia.

LITERATURE REVIEW AND HYPOTHESIS DEVELOPMENT

LITERATURE REVIEW

Service Quality.

Service quality is a measure of how well the service delivered met the customer's expectations (Parasuraman, 1988). The quality of service is a term that describes a level of excellence, provided by the product's provider (producer) to the customer, to meet the customer's desires (Naik *et al.*, 2010). The quality of service must begin with the customer's needs and end with the customer's perception (Kotler & Keller, 2009). The quality of service is the level of how good or bad the products or services provided by the service companies to satisfy the consumers' demands were (Lovelock, 2002).

A hospital is a place that organizes health service activities, and it can also be used for the education of health workers and to undertake research. The functions of a hospital include: (1) Carrying out medical procedures. (2) Carrying out medical and non medical support services. (3) Carrying out nursing services and care. (4) Carrying out referral services. (5) Carrying out education and training. (6) Carrying out research and development (Azwar, 1996).

Parasuraman (1988) also stated that there are five dimensions in determining service quality, namely: tangibles, reliability, responsiveness, assurance, and empathy. If the five dimensions above have been fulfilled then the personal relationship between the patient will certainly feel comfortable with the service that have provided. This will make a deep impression on the patient, in the form of satisfaction with the service provided by the hospital.

Customer satisfaction.

Customer satisfaction is the level of pleasure or disappointment felt by a customer about a product or service offered to them (Rangkuti, 2013). Meanwhile, according to Kotler & Keller (2009) customer satisfaction can be interpreted as a feeling of pleasure or disappointment by customers that comes from a comparison between their impressions of the performance or results of a service or product and the customers' expectations, where the context of the customers' satisfaction expectations are estimates or their beliefs about what is received. In other words, customer satisfaction is the quality of the service or product, as seen from the point of view of the consumers. Customer satisfaction can be described from the three dimensions described by Kotler & Keller (2009), which include emotions. Emotional factors are usually caused by the emotional value that is given by the environment or the brand of a product and service such as pride and self-confidence. A product that is of a certain quality, but sells for a cheaper price than the same products of the same quality will have a higher value. The cost and

convenience matter to consumers who do not need to incur additional costs, or do not need to waste time, when obtaining a product or service and thus tend to be satisfied with the product or service. With good customer satisfaction, the hospital business will run and develop, which will certainly encourage continued good service and better hospital facilities, so these will increase the hospital's profits (Syah, 2014).

Word of Mouth.

Customer loyalty includes an attitude component and a customer behavior component, these are related to the customer's attitude which is reflected in the intention to return to buy the product, the willingness to recommend the company to others (word of mouth), not changing to other products easily and being willing to pay a premium price (Anselmsson *et al.*, 2014). The opinions of Brown *et al.* (2005) and Li (2013) were that word of mouth is an informal communication between people who are not commercially connected, who receive information about brands, products, companies, or services. Davidow (2000) also stated that a good, satisfying relationship can be promoted through positive word of mouth. According to Sumardy (2011), based on the Word of Mouth Marketing Association (WOMMA) which is the official body for word of mouth marketing, defining word of mouth marketing is the organization's effort to influence how customers create and distribute relevant marketing information to consumers. Based on the opinion of Tjiptono (2000) word of mouth is a personal or non-personal statement made by someone other than a member of a customers' organization. Customers' word of mouth, obtained through other customers and based on the level of trust in experts, friends or family, tend to be more quickly accepted. Word of mouth can also be used as a reference for customers of these services, but it is usually difficult to evaluate services that have not been purchased or experienced personally. A customer who is loyal will tend to know the product better, need less information, buys more of it, is prepared to pay a higher price for the product, and recommends the product by word of mouth to other people (Ganesh, 2000).

According to De Bruyn & Lilie (2008) the concept of word of mouth is constructed differently, such as informal transfers of positive purchases, and negative behavior related to consumption, among consumers. Word of mouth refers to informal communications between individuals about the ownership, use and certain characteristics of goods and services, sales, services and social issues (Yu *et al.*, 2017). Customer loyalty is related to all the things that can attract customers, and will make them buy a product, buy it repeatedly (often), buy it in greater quantities and bring in even more customers with a word of mouth promotion system (Fornell, 1992).

The exponential growth in the use of online social media, which makes word of mouth easier to spread to many people simultaneously, has made word of mouth stand out (Gopinath *et al.*, 2014). Beside, other studies have shown that word of mouth has a significant impact on the formation of a consumer's attitude; positive word of mouth can reduce the risk associated with purchasing a new product or service (Srinivasan *et al.*, 2002). As an important but difficult to manage marketing power, word of mouth is believed to be able to complement and extend the effects of an advertisement (Hogan &

Lemon, 2004). For example, the initial marketing activities (advertising and promotion) trigger an initial purchase reaction, then the purchasing experience triggers the spread of word of mouth, as the consumers share their experiences with others (Chevalier *et al.*, 2003).

It can be concluded that word of mouth cannot be found or created; because word of mouth is made voluntarily by consumers, without getting any gift or reward. Trying to fabricate word of mouth is very unethical and can damage a company's brand image and reputation (Handini & Ruswanti, 2016).

HYPOTHESIS DEVELOPMENT

Relationship Between Service Quality and Customer Satisfaction.

Service quality can be categorized as the expected level of excellence and control over the level of excellence to meet the customers' desires, in this case the customers' satisfaction (Lovelock, 2002). The quality of service and level of customer satisfaction are considered to determine the possibility of a repurchase decision (Parasuraman, 1988). Customer satisfaction from using a service can be seen as an evaluation by the customers of their experience and their reaction to certain products in a transaction, or their relationship to the quality of the service provided (Susanto, 2018). The level of customer satisfaction with services is an important factor in developing a service delivery system that is responsive to customers' needs, minimizing costs and time and maximizing the impact of the service on the target population (Kartawidjaja & Syah, 2016).

In terms of service quality, the importance of service quality's dimensions and customer behavior can be drawn a relationship, that customers' perceptions of the service quality affect the overall satisfaction and customers' perceptions of values that provide a positive relationship on the intensity of the customers' behavior and retention, so that the concept of customer satisfaction can seen within a certain scope, such as in a store, where customer satisfaction will be closely related to the intensity of the repurchase decisions (Mittal, 2013). Feedback and information are important elements for building an effective service delivery system, including the level of customer satisfaction and improving the service quality (Kartawidjaja & Syah, 2016). Customer satisfaction can be called the performance evaluation of a service's quality, because customers will compare the output with their expectations before buying or consuming a product (Susanto, 2018).

In a study on the service quality, it was found that the service qualities had a strong correlation with customer satisfaction (Ajami *et al.*, 2018). Maximum service quality will increase patient satisfaction (Kulsum & Syah, 2017). Service quality has a significant and positive influence on patient satisfaction (Kartawidjaja & Syah, 2016). The relationship between service quality and external customer satisfaction is found by comparing the responses of service users in the health and hospitality industries. The findings of this study indicate that the quality of service of companies engaged in the health sector with real dimensions, reliability and empathy have a significant effect on customer satisfaction. Meanwhile, other dimensions, namely assurance and responsiveness, do not have a significant effect on customer satisfaction. The test results of the relationship of service

quality to customer satisfaction in the scope of hotel services show that personality, reliability, responsiveness and empathy have a significant effect on customer satisfaction (Panda, 2014). The effect of service quality on customer satisfaction in private hospitals and government hospitals in India has also been researched; the quality of service was measured by several dimensions, such as: infrastructure, the quality of employees, clinical care processes, administrative procedures, the hospitals' image, social responsibility and trust. This study concludes that clinical care, administrative procedures, safety indicators and trustworthiness have a significant effect on patients' satisfaction in government hospitals. Infrastructure, image and trust are significant predictors of patient satisfaction in private hospitals. Government hospitals in India are known to provide qualified doctors and private hospitals are preferred for their infrastructure facilities. The quality of the staff has the highest correlation with customer service, in terms of helping patients and showing what is important in the context of hospital services (Pantouvakis, 2013). From the literature mentioned above, the first hypothesis that can be proposed is:

H1: Good service quality will increase customer satisfaction.

Relationship Between Service Quality and Word of Mouth.

The quality of service in a service business is a decision or attitude related to the levels of service excellence and customer loyalty desired by that business (Parasuraman, 1998). Customer loyalty is related to all the things that can attract customers, and which will make them buy the product, buy it repeatedly (often), buy it in greater quantities and bring in even more customers through a word of mouth promotion system (Fornell, 1992). Word of mouth is considered to be a network of patient relationships that can ensure that a hospital gains a competitive advantage, which is essential for the success of its business (Hsu, 2018). Customer loyalty can be considered as their former patients' commitment to consistently reuse the hospital's services in the future. Loyal customers, in this case patients, will not only use certain quality services again, but also recommend them (by word of mouth) to other prospective customers; as a result loyal customers will help to defend the hospital's business from market conditions and difficult competition (Mortazavi, 2009). Service quality has an influence on patient loyalty, this is supported by the results of research which found that good quality hospital services will increase their patients' loyalty to the hospital (Sumiyati & Syah, 2016). This serves to link the processes that lead to purchases and consumption, with post-purchase phenomena such as: switching behavior, repeated purchases and word of mouth (Churchill, 2016). This relates the concept of service quality to customer perceptions and customer concepts which imply that the perceived service quality can be seen as a level and direction of perception between customer perceptions and expectations, resulting in customer loyalty (Parasuraman, 1998).

Research conducted by Li (2013) showed that service quality is positively related to word of mouth. The study conducted by Mukerjee (2018) also established a positive relationship between service quality and word of mouth, because banks already have regulations, structure and technology. This study proved that the customers of retail banks in emerging markets will be involved in positive word of mouth recommendations

if they are impressed with the quality of the services offered (Mukerjee, 2018). Quality of service is considered an important factor for developing patient loyalty (Zarei, 2012). Service quality is a key factor for creating customer satisfaction that will increase customer loyalty (Ajami *et al.*, 2018). Developing a conceptual model for understanding the positive or negative effects of overall service quality on word of mouth communications, a study showed that employees' attitudes are the most important service quality attributes, and they can produce positive word of mouth (Choudhury, 2014). From the literature above, the second hypothesis that can be proposed is:

H 2: Good service quality will improve word of mouth.

Relationship Between Customer Satisfaction and Word of Mouth.

Customer satisfaction is important for service providers, because customers spread a sense of satisfaction to potential customers, thus increasing the company's reputation. So if customers are satisfied, they will inform their colleagues and family about this by word of mouth (Burnham & Leary, 2018). Customer satisfaction is an important factor for maintaining organizational sustainability and customer loyalty (Donio, 2006). One of the most significant results in the marketing literature is customer satisfaction. This serves to link the processes that lead to purchases and consumption, with post-purchase phenomena such as switching behavior, repeated purchases and word of mouth (Churchill, 2016). Customers who get products or services that meet or exceed their expectations tend to give a positive response about the company. One of them is through word of mouth to their colleagues. Word of mouth is an effective way to build a positive image for a hospital or clinic, word of mouth can also increase the number of purchases and sales (Handini & Ruswanti, 2016). Satisfied customers will be more likely to remain loyal, by making repeated purchases and recommending products by word of mouth (Fornell, 1992). While Griffin (2003) argued that loyal customers are customers who are very satisfied with certain products or services, and they are enthusiastic about introducing them, by word of mouth, to anyone they know. A customer who is loyal will tend to know the product better, need less information, buy more of it, be prepared to pay a higher price for the product and offer the product through word of mouth to other people (Ganesh, 2000).

Fornell *et al.* (2009) provided the view that customer satisfaction can encourage customers to continue to buy and use the products, the impact of this means they will continue to provide good recommendations to others about the products (word of mouth). Jham (2018) explained that the satisfaction felt by customers can have a significant influence on the formation of customer loyalty. This is due to feeling happy, and being happy to encourage consumers to choose without realizing that their needs have been met.

According to research by Handini & Ruswanti (2016) word of mouth plays an important role in marketing Rumah Sehat Wanita Hauraa, so that patient satisfaction has a significant effect on word of mouth. According to the research of Brown *et al.* (2005) customer satisfaction is highly positively correlated with word of mouth. Therefore, it is very clear that customer satisfaction is a key variable that influences the

word of mouth intention. Customer satisfaction alone cannot be responsible for driving future purchasing power or spreading positive recommendations by word of mouth. In addition, customer loyalty will also lead to word of mouth intentions. The presence of loyalty will definitely have a different impact on the customer's word of mouth intentions (Burnham & Leary, 2018). From the literature above, the third hypothesis that can be proposed is:

H 3: Good customer satisfaction will increase worth of mouth.

Model Framework for the Relationships between Service Quality, Customer Satisfaction and Word of Mouth.

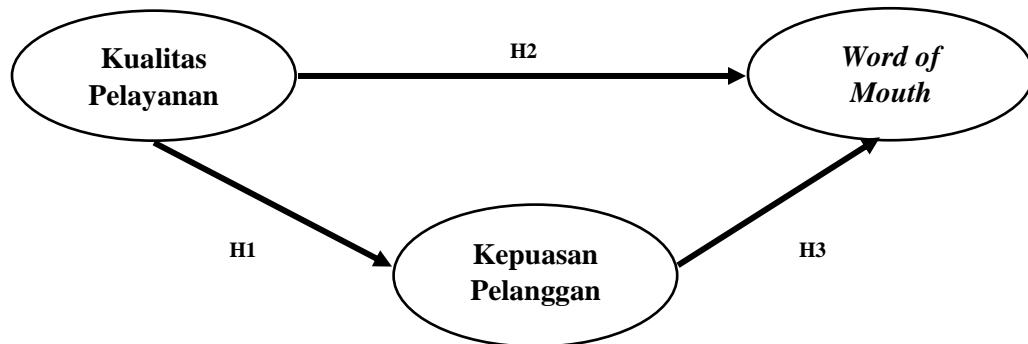

Figure 1. Model Framework for the Relationship between Service Quality, Customer Satisfaction and Word of Mouth

RESEARCH METHOD

This research used a quantitative approach with the primary data being collected using the questionnaire survey method. This research started by developing its hypotheses which involved finding the right procedures for using a specific data source. This research included confirmatory research, which is research that aims to test a theory or hypothesis to strengthen or reject the theory or hypothesis of pre-existing research. Judging from the time dimension, this study was classified as a cross-sectional study because it was conducted only once (Cooper & Schindler, 2010).

We conducted our survey in a private hospital in Indonesia. The research started in December 2019, and was conducted for 30 days from 09.00 to 16.00 every day by directly meeting the respondents and inviting them to fill out the questionnaire. The population in this study consisted of public (private) patients who attended an outpatient examination (polyclinic and emergency room) at the hospital.

The sampling technique used in this study was purposive sampling. Purposive sampling is included in the non-probability sampling methods. The purposive sampling method is a technique for determining a sample with certain considerations or criteria. The sample in this study is that some of the customers in this case are outpatients (polyclinic and emergency room). The sample taken in this study has the following criteria: private patients, or old patients who have had an outpatient's examination

(polyclinic and emergency room), or existing customers who have had at least 2 examinations as outpatients at the hospital.

The variables involved in this study were the service quality as an exogenous variable. The instrument used to measure service quality was based on the instrument developed by Parasuraman (1988). The quality of service included 22 question items with indicators including: tangibles, reliability, responsiveness, assurance and empathy. Customer satisfaction acted as an endogenous variable. The instrument used to measure customer satisfaction was based on the instrument developed by Oliver (1997). The measurement of customer satisfaction included three question items with indicators including: decision to choose, do the right thing and general satisfaction. The last variable was word of mouth, which was an endogenous variable. The instrument used to measure word of mouth was based on the instrument developed by Syah (2014). Measurement of the word of mouth included three question items with indicators including: always recommending to others, telling good things, and happy if other people subscribe to the same place. To measure each of the research instruments, a Likert scale was used, with five alternative answers: strongly disagree (SD), disagree (D), neither agree or disagree (BAD), agree (A) and strongly agree (SA) (Sugiyono, 2011).

Before being used in the actual research, the research questionnaire's instruments were tested first. The instruments' trial was conducted to find out whether the instruments produced really good results, because the merits of the instruments would affect whether or not the data were correct and determine the quality of the research's results. How good or bad the instruments were was shown by their level of validity (validity) and reliability (reliability) (Hair *et al.*, 2013). This showed whether or not they were appropriate to use on the customers of the hospital. The trial of these instruments was conducted on 33 respondents outside the population that were sampled in the actual research. From the results of the validity and reliability test of the 28 questions in the questionnaire, 26 passed the tests with a Kaiser-Meyer-Olkin (KMO) value > 0.500 and a Cronbach's alpha value of > 0.600 (Appendix 9).

This research's population was not limited; therefore the number of samples could be calculated based on the total number of questionnaires that passed the validity and reliability test $\times 5$, ie $26 \times 5 = 130$ respondents. Hair *et al.* (2013) suggested that the minimum sample size is 5 to 10 observations for each estimated parameter, so the sample used in this study amounted to $26 \text{ items} \times 5$. So, the minimum number of samples needed was 130 respondents. In this case the researcher used a sample of 303 respondents. The testing phase conducted in this study was assisted by structural equation modeling (SEM) with the linear structural relations (LISREL) program (Ghozali, 2014).

RESULTS AND DISCUSSIONS

RESULTS

The profiles of the 303 respondent patients treated at the hospital showed that the majority of patients were women (53.1%), aged between 26 to 35 years old (30.4%), 64.4% held a bachelor's degree (S1), with 47.9% of them employed as private employees,

with a monthly income > Rp. 3,850,000. This showed that the hospital's patients were of a productive age, with a fairly high education, had jobs as private employees and who already had an awareness of healthy lifestyles.

Table 1. Profile of Respondents.

Characteristics	Profil	Number of Respondents	%
Sex	Male	142	46.9%
	Female	161	53.1%
	TOTAL	303	100.0%
Age	17 – 25 years old	42	13.9%
	26 – 35 years old	92	30.4%
	36 – 45 years old	84	27.7%
	46 – 55 years old	49	16.1%
	>56 years old	36	11.9%
	TOTAL	303	100.0%
Last education	Junior High School	4	1.3%
	Senior High School	42	13.8%
	D3	22	7.3%
	S1	195	64.4%
	S2	36	11.9%
	S3	4	1.3%
	TOTAL	303	100.0%
Profession	Student / College	21	6.8%
	PNS / TNI / POLRI	27	8.9%
	Private employees	145	47.9%
	BUMN	35	11.6%
	Others	75	24.8%
	TOTAL	303	100.0%
Monthly income	Rp < 3,850,000-	21	6.9%
	Rp > 3,850,000-	282	93.1%
	TOTAL	303	100.0%

The results of the structural equation's output from LISREL version 8.8., showed that service quality (SQ) had a greater positive effect on customer satisfaction (CS) that was equal to 0.79, with a value of R Square (R^2) = 0.62. Service quality (SQ) had a greater positive effect on word of mouth (WOM), which was equal to 0.46 and customer satisfaction (CS) had a smaller positive effect on word of mouth (WOM), which amounted to 0.40, with a value of R Square (R^2) = 0.67.

The results of the output reduced form equation from LISREL version 8.8., showed that service quality (SQ) had a greater positive effect on customer satisfaction (CS) that was equal to 0.79, with a value of R Square (R^2) = 0.62. Service quality (SQ) had a smaller positive effect on word of mouth (WOM) which was equal to 0.78, with a value of R Square (R^2) = 0.61.

We tested the suitability of this model using structural equation modeling (SEM) with the LISREL program version 8.8. The following goodness of fit index was generated after testing:

**Table 2.The Result of Goodness of Fit Index Structural Equation Modeling (SEM)
LISREL Version 8.8**

Group	Indicator	Value	Information
1	Degrees of Freedom	36	Good Fit
	Chi-Square	54.55	
	Chi Square / Degree of Freedom	54.55 / 36 = 1.51	
	Probability (P)	0.024	
	Estimated Non-centrality Parameter (NCP)	18.55	
2	Confidence Interval for NCP	2.54 : 42.52	Good Fit
	Root Mean Square Error of Approximation (RMSEA)	0.041	
	Confidence Interval for RMSEA	0.015 : 0.063	
3	P-Value for Test of Close Fit (RMSEA < 0.05)	0.73	Good Fit
	Expected Cross-Validation Index (ECVI) Model	0.38	
	ECVI for Saturated Model	0.44	
	ECVI for Independence Model	6.80	
4	Confidence Interval for ECVI	0.33 : 0.46	Good Fit

Source: Primary Data Processed January 2020.

From the results of the goodness of fit index's measurement above (Table 2), it can be concluded that all the parameters met the expected conditions. Regarding the item indicators, namely: chi square, RMSEA, ECVI, AIC & CAIC, fit index, critical N and GFI & AGFI, they are all a good fit. From the summary of the results from LISREL version 8.8., this analysis was chosen to determine the gradual influence on service quality, customer satisfaction and word of mouth, and, as explained in the literature review above, three hypotheses were formulated by this study. To find out whether the hypotheses were supported by the data or not, the t-value was compared with the t-table of 1.96 (Ghozali, 2014). If the t-value > 1.96 , it could be concluded that the research's hypotheses were supported by the data (and proven significantly).

An image of the test model of the research model, and the test of the hypotheses using the LISREL version 8.8., is shown below. The hypotheses test results and the tests

of the causality relationship of each research variable are also presented in the following figure 2 and table 2.

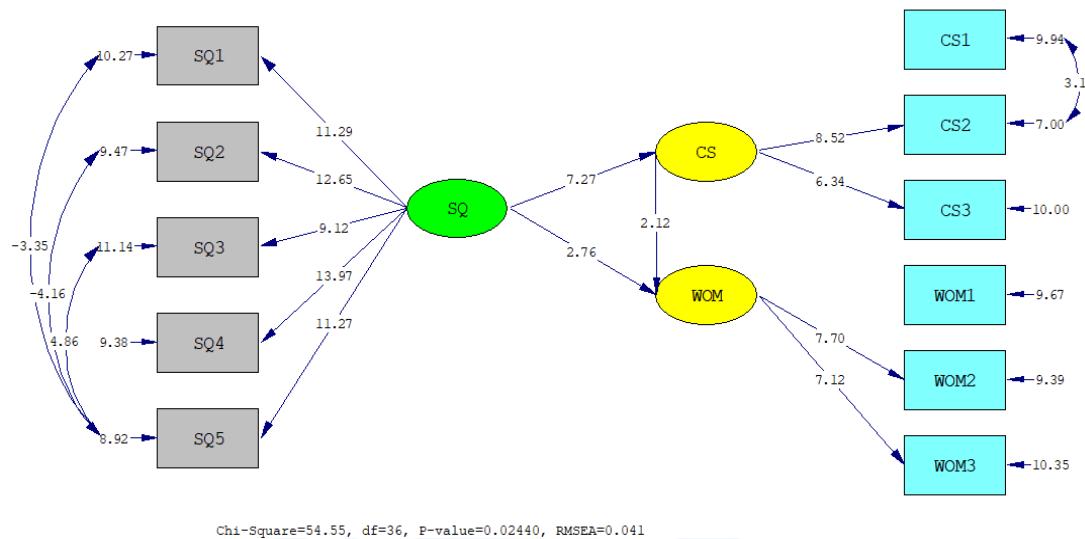

Figure 2. Results of the Research Model (LISREL Path Diagram Version 8.8.)

Table 2. Estimation Results with LISREL Model Version 8.8.

Variab;e	Relationship	Path Coefficient	T-Value	T-Table	Information
Service Quality	→ Customer Satisfaction	0.79	7.27	1.96	H1 received
Service Quality	→ Word of Mouth	0.46	2.76	1.96	H2 received
Customer Satisfaction	→ Word of Mouth	0.40	2.12	1.96	H3 received

Source: Primary Data Processed January 2020.

The results show the direct effect of service quality on customer satisfaction. The path coefficient was 0.79, the t-value was above the t-table's value ($7.27 > 1.96$) so that the relationship between these two variables is statistically significant. This result provides empirical evidence about the positive effect of service quality on customer satisfaction. This indicates that the better the quality of the service provided to customers is, the higher the customers' satisfaction will be. Therefore, the first hypothesis is supported.

The direct effect of service quality on word of mouth was found. The path coefficient was 0.46 and the t-value was above the t-table's value ($2.76 > 1.96$). This result indicates that service quality has a significant positive effect on word of mouth. The better the quality of the service provided to customers is, the more likely that word of mouth will increase. Therefore, the second hypothesis is supported.

Finally, we found the direct effect of customer satisfaction on word of mouth. The path coefficient was 0.40 and the t-value was above the t-table's value ($2.12 > 1.96$). This result provides empirical evidence that customer satisfaction has a significant positive effect on word of mouth. The more satisfaction that a customer feels, the more likely it is that word of mouth will increase. This result supports our third hypothesis.

DISCUSSIONS

Quality of Service Improves Customer Satisfaction.

This research successfully demonstrated that service quality has a positive effect on customer satisfaction. This means that better quality service, will have a positive impact on customer satisfaction, so there will be fewer complaints from customers about the quality of the service. The findings of this study support the previous research conducted by Thurau (2004) which stated that the quality of customer service affects their relationships both directly and indirectly and causes increased customer satisfaction. According to Mittal & Gera (2013), in terms of service quality, the importance of service quality's dimensions and customer behavior can be drawn a relationship, that customers' perceptions of service quality affect their overall satisfaction and the customers' perceptions of values that provide a positive relationship with the intensity of behavior and retention of customers, so the concept of customer satisfaction can be seen within a certain scope, such as in a store, where customers' satisfaction will be closely related to the intent to repurchase. Whereas according to Kartawidjaja & Syah (2016) feedback and information are important elements for building an effective service delivery system, including the level of customer satisfaction and improvement in the service's quality.

Haghghi *et al.* (2012) concluded that a positive service quality can increase satisfaction; this is due to the quality of service that is described by the dimensions of responsiveness and physical evidence so it becomes a real thing that is prioritized by customers. Rampl *et al.* (2012) found that service quality had a positive and significant effect on customer satisfaction; this is due to improvements to people's ability to serve customers.

Research conducted by Hisam *et al.* (2016) concluded that there was a relationship between service quality and customer satisfaction, but that study only examined the relationship between variables and did not seek for a relationship from the existing dimensions. In a study of the service quality of electronic services, it was found that the quality of electronic services was strongly correlated with customer satisfaction (Ajami *et al.*, 2018). Research conducted by Kulsum & Syah (2017) concluded that maximum service quality will increase the patients' satisfaction. Service quality has a significant positive effect on patients' satisfaction (Kartawidjaja & Syah, 2016).

Quality of Service Improves Worf of Mouth.

This study shows that service quality has a positive effect on word of mouth. This means that the better the quality of the services provided, positive word of mouth will recommend the services offered, thus impacting on the number of customer visits. Wong & Sohal (2003) explained that plenary service quality is something that needs to

be pursued to make a positive and significant influence on customer loyalty; this condition is because customers will prefer to stay in a restaurant that is able to serve their every need. Hamenda (2018) provided an explanation that service quality is able to influence loyalty, due to the staffs' empathy for the customer. According to Parasuraman (1988), the quality of service offered by a service provider is a global decision or attitude related to service excellence and customer loyalty. Customer loyalty is related to all the things that can attract customers, and make them buy a product, buy it repeatedly (often), buy it in greater quantities and bring in even more customers with a word of mouth promotion system (Fornell, 1992). Li (2013) suggested that service quality is positively related to word of mouth. Word of mouth is considered to be a network of customer relationships that can ensure that businesses (betul, intinya untuk memperkuat bahwa dipenelitian lainpun ada penelitian yang hasilnya sama dengan penelitian ini) gain a competitive advantage, which is essential for their success (Hsu, 2018).

Customer Satisfaction Increases Word of Mouth.

This research successfully demonstrated that customer satisfaction has a positive effect on word of mouth, meaning that the greater satisfaction felt by the customers will cause them to pass on their satisfaction by word of mouth and recommend the business to others. Ngo (2015) provided an explanation that customer satisfaction plays a major role in shaping customer loyalty, which is caused by the comfort that is generated. This finding indicates that customer satisfaction is one of the items that are able to encourage customers to be loyal to a company. Gures *et al.* (2014) explained that customer satisfaction is able to have an impact on customer confidence, so they keep using the product. Netemeyer *et al.* (2010) provided the view that customer satisfaction encourages customers to continue to buy and use the products; they will then recommend the products by word of mouth to others.

Research conducted by Yu *et al.* (2017) successfully demonstrated that customer satisfaction has a positive effect on word of mouth, meaning that the greater satisfaction felt by the customers will cause them to make positive recommendations by word of mouth to other people. Customer satisfaction is important for service providers, because happy customers spread a sense of satisfaction to potential customers, thus increasing the company's reputation. So if customers are satisfied, they will make positive word of mouth recommendations to their colleagues and family (Burnham & Leary, 2018). This serves to link the processes that lead to purchases and consumption, with post-purchase phenomena such as switching behavior, repeated purchases and word of mouth (Churchill, 2016). Customers who get products or services that meet or exceed their expectations, tend to give a positive response to the company. One of them is by giving positive word of mouth to other shoppers. Word of mouth is an effective way to build a positive image for a hospital, besides the fact that it can also increase the number of purchases and sales (Handini & Ruswanti, 2016). Customers who are satisfied will be more likely to be loyal, and make repeated purchases and recommend products through word of mouth (Fornell, 1992).

The exponential growth in the use of online social media, which makes word of mouth easier to spread to many people, has made word of mouth very prominent (Gopinath *et al.*, 2014). In addition, research shows that word of mouth has a significant impact on the formation of a consumer's attitude, positive word of mouth can reduce the risk associated with purchasing products or services (Srinivasan *et al.*, 2002). As an important but difficult to manage marketing power, word of mouth is believed to be able to complement and extend the effects of advertising (Hogan & Lemon, 2004). For example, initial marketing activities (advertising, promotion) trigger an initial purchase reaction, then purchasing experiences trigger the spread of word of mouth, as people share their experiences with others (Chevalier *et al.*, 2003). The company develops loyal customers, so they can be very valuable assets for the company. The customers not only continue to use the company's products or services, but they themselves will also recommend the company by word of mouth to others, according to their experiences (Yarimoglu, 2014).

According to Handini & Ruswanti (2016) word of mouth plays an important role in marketing Rumah Sehat Wanita Hauraa, so that patient's satisfaction has a significant effect on word of mouth. According to the research of Brown *et al.* (2005) customer satisfaction is highly positively correlated with word of mouth. Therefore, it is very clear that customer satisfaction is a key variable that influences word of mouth intentions. Customer satisfaction alone cannot be responsible for driving future purchasing power, or spreading positive recommendations by word of mouth. In addition, customer loyalty will also lead to positive word of mouth intentions. The presence of loyalty will definitely have a different impact on the customer's word of mouth intentions (Burnham & Leary, 2018).

CONCLUSION

The results of this study conclude that service quality has a significant positive effect on customer satisfaction, the better the quality of the service offered, the greater will be its impact on customer satisfaction, so that there will be few complaints from customers about the quality of the service. Service quality has a significant positive effect on word of mouth, the better the quality of the service provided then the more positive are the word of mouth recommendations for the service offered, so that it has an impact on the number of customer visits. Customer satisfaction has a significant positive effect on word of mouth; the greater the satisfaction felt by customers, the more frequently and positively they will recommend the business by word of mouth to others. Customer satisfaction is important to service providers, as customers spread a sense of satisfaction to potential customers, thus enhancing the company's reputation.

Managerial Implications.

The implications of the results of this study are expected to be beneficial for hospitals in Indonesia, which can use them to create a good quality service flow, including such things as: polite ways of communicating, friendly service, a short waiting

time for patient services, how to dress neatly and educate patients. All of these should increase customer satisfaction, and with the improved quality of service and customer satisfaction, then a positive word of mouth can develop, which will ultimately benefit the patients in general and hospitals in the future. The implication of this research for researchers is that it will add to the literature relating to research that has been carried out, that service quality and customer satisfaction have a positive effect on word of mouth.

Limitations and Suggestions for Future Research.

The limitation of this study is that it was only carried out on general private patients who seek outpatient treatment (polyclinic and emergency room) and it was limited to patients who have had at least two treatment visits to one hospital, hence the limited number of respondents. For further research, it would be better if this research was carried out in all the lines of health services at a hospital, both outpatient and inpatient, by involving all the patients, both private, insurance and BPJS patients. It would be even better if further research were to be carried out in several hospitals (both regional general hospitals or private hospitals) at a certain time with a larger number of respondents, and by adding research variables such as: customer retention, communication skills and service prices, in order to obtain more varied data and variable results.

(JMMR) Journal of Medico legal-ethics and Hospital Management by Master of Hospital Management Program UMY routinely Three times a year from January-April, May-August, and September-December. The determination of articles contained in JMMR is done through a blind review process by JMMR editors and reviewers by considering two main aspects: relevance and contribution of articles to the development of theory and practice and the fulfillment of the standard requirements of journal publication. Editor and reviewer provide constructive feedback from the results of the evaluation to the author of the article.

(JMMR) *Jurnal Medicoeticolegal Dan Manajemen Rumah Sakit oleh Program Magister Manajemen Rumah Sakit UMY secara berkala sebanyak Tiga kali setahun yakni Januari-April, Mei-Augustus, dan September-Desember. Penentuan artikel yang dimuat dalam JMMR dilakukan melalui proses blind review oleh editor dan reviewer JMMR dengan mempertimbangkan dua aspek utama yakni: relevansi dan kontribusi artikel terhadap pengembangan teori dan praktik serta terpenuhinya persyaratan baku publikasi jurnal. Editor dan reviewer memberikan masukan yang bersifat membangun dari hasil evaluasi kepada penulis artikel.*

General requirements:

- (1) Articles in the form of research results, thinking, scientific analysis, and or theory studies in the field of Health and Hospital Management.
- (2) Articles submitted to journals are not submitted to other journals / publications and have not been published in other journals / publications.
- (3) Articles are written in English by following the writing guidelines at JMMR.
- (4) The registration process in JMMR is fully done independently by the author. All data is expected to be filled correctly, either name, address, agency, until e-mail. Performed online :

<http://journal.ums.ac.id/index.php/mrs/about/submissions#onlineSubmissions>

- (5) For Bestari Partners (Reviewer), registration

is done by the admin / journals manager, therefore we expect the reviewers to send the CV to the manager of the journal, to be registered by the manager of the journal.

- (6) Reviewers may also register independently, but are listed as Author and Reader. To get the role (role) and access rights as a Reviewer, please contact the Journal manager.
- (7) Articles are written in format, 3cm margins for left, right, up, and down. Written with the letter Aparajita size 11 with a space left 1 right. In accordance with the JMMR template.
- (8) The editors have the right to edit the grammar and spelling of the submitted manuscript without prejudice to or alter the intent of writing.

Ketentuan Umum:

1. Artikel berupa hasil penelitian, pemikiran, analisis ilmiah, dan atau kajian teori dalam bidang Kesehatan dan Manajemen Rumah Sakit.
2. Artikel yang dikirim ke jurnal tidak sedang dikirimkan ke jurnal/terbitan lain dan belum dipublikasikan dalam jurnal/terbitan lain.
3. Artikel ditulis dalam **bahasa Inggris** dengan mengikuti pedoman penulisan di JMMR.
4. Proses pendaftaran Jurnal JMMR sepenuhnya dilakukan secara mandiri oleh penulis. Seluruh data diharapkan disi secara benar, baik nama, alamat, instansi, hingga e-mail. Dilakukan secara online:

<http://journal.ums.ac.id/index.php/mrs/about/submissions#onlineSubmissions>

5. Untuk Mitra Bestari (Reviewer), pendaftaran dilakukan oleh admin / pengelola jurnal, untuk itu kami mengharapkan untuk para Reviewer mengirimkan CV kepada pengelola jurnal, agar dilakukan pendaftaran oleh pengelola jurnal.
6. Reviewer juga dapat melakukan pendaftaran secara mandiri, tetapi terdaftar sebagai Author dan Reader. Untuk mendapatkan peran (role) dan hak akses sebagai Reviewer, harap menghubungi pengelola Jurnal.
7. Artikel ditulis dengan format, margin 3 cm untuk rata kiri, kanan, atas, dan bawah. Ditulis dengan huruf **Aparajita ukuran 11 dengan spasi 1 rata kiri-kanan**. Sesuai dengan template JMMR.
8. Redaksi berhak mengedit tata bahasa dan

ejaan naskah yang dimuat tanpa mengurangi atau mengubah maksud tulisan.

CONFIRMATION OF REGISTRATION

1. After each registration, Mandatory to confirm registration to journaling manager, via email or via WhatsApp.
2. Registration should also include Full Name and email and active mobile phone number (registered number with better chat app).
3. Admin will periodically check the registration account periodically. If you see any peculiarities in the registration account such as Incomplete Name, False Email Address, or any other suspicious admin of the account will be disabled and if there is any indication of damaging the system, or attempting to vandalize it, the account will be removed from the registration of the journal. That's done considering the system of OJS is still a lot to have a gap that can be utilized by people who are not responsible. Therefore, to avoid such incidents, the website admin will always monitor the registered users, so as not to find irresponsible users and damage the system.
4. Confirmation via Subject Email filled with "Confirm JMMR Journal Registration". Fill in email: Full name, account name, and mobile phone number. Send to jmmr@umy.ac.id
5. Confirmation Confirmation Through WhatsApp Chat contents: Confirmation of P2KP Journal Registration; Full name; Account name; and Email. Send to dr Mahendra Prasetyo Kusumo,,MM (085727351630) / Admin JMMR a.n Junior Hendri W S.I.P (+6282326796566)

KONFIRMASI PENDAFTARAN

1. Setiap setelah melakukan pendaftaran, Wajib untuk melakukan konfirmasi pendaftaran kepada pengelola jurnal, melalui email atau melalui WhatsApp.
2. Pendaftaran juga hendaknya mencantumkan Nama Lengkap serta email dan nomor handphone yang aktif (nomor yang terdaftar dengan aplikasi chat lebih baik).
3. Admin secara berkala akan melakukan pengecekan pada akun pendaftaran secara berkala. Jika dilihat ada keanehan pada akun pendaftaran seperti Nama yang tidak lengkap, Alamat Email Palsu, atau yang membuat kecurigaan admin lainnya akun tersebut akan di non-aktifkan dan jika terdapat indikasi hendak merusak sistem, atau mencoba

mengingat sistem dari OJS ini masih banyak memiliki celah yang dapat dimanfaatkan oleh para orang yang tidak bertanggung-jawab. Oleh sebab itu, untuk menghindari kejadian tersebut, admin website akan selalu memonitor pengguna yang terdaftar, agar tidak ditemukan pengguna yang tidak bertanggung jawab dan merusak sistem.

4. Konfirmasi melalui **Email** Subjek diisi dengan "Konfirmasi Pendaftaran Jurnal JMMR". Isi email: Nama Lengkap, nama akun, dan nomor handphone. Kirim ke jmmr@umy.ac.id
5. Konfirmasi Konfirmasi Melalui **WhatsApp** Isi chat: Konfirmasi Pendaftaran Jurnal JMMR; Nama Lengkap; Nama Akun; dan Email. Kirim ke dr Mahendra Prasetyo Kusumo,,MM / Admin JMMR a.n Junior Hendri W S.I.P (+6282326796566)

AUTHOR GUIDELINES: MANUSCRIPT FROM RESEARCH STUDY

KETENTUAN SISTEMATIKA PENULISAN ARTIKEL BERASAL HASIL PENELITIAN DENGAN UJI HIPOTESIS STATISTIK (PENELITIAN PENGARUH DAN HUBUNGAN ANTAR VARIABEL)

The Manuscript written in the following order:

Artikel ditulis dengan urutan sebagai berikut:

TITLE

The title of the article is written clearly, straightforward and no more than 15 words. Preferably the title is written simple, intriguing but describes the contents of the article (may be written with a sentence).

JUDUL

Judul artikel ditulis jelas, lugas dan tidak lebih dari 15 kata. Sebaiknya judul ditulis sederhana, menggugah rasa ingin tahu namun menggambarkan isi artikel (boleh ditulis dengan kalimat tanya).

ABSTRACT

Abstracts are written in English with spaces (one). The abstract contains a description of the research objectives, methods used, and research results. The abstract is written in a concise, solid and written in one paragraph (maximum 200

words) which summarizes the importance of research variables and research objectives and research methods (eg samples and analytical techniques used), and answers to the formulation of problems or research results. The abstract is given a keyword that contains the basic ideas or concepts that represent the field under study. Keywords (keywords) maximum 6 words.

ABSTRAK

Abstrak ditulis dalam bahasa Inggris dengan spasi tnggal (satu). Abstrak memuat uraian mengenai tujuan penelitian, metode yang digunakan, dan hasil penelitian. Abstrak ditulis secara ringkas, padat dan ditulis dalam satu alinea (maksimal 200 kata) yang merangkum berisi pentingnya variable penelitian dan tujuan penelitian serta metode penelitian (misal: sampel dan teknik analisis yang digunakan), dan jawaban atas rumusan masalah atau hasil penelitian. Abstrak diberi kata kunci yang berisi ide-ide atau konsep dasar yang mewakili bidang yang diteliti. Kata kunci (keywords) maksimal 6 kata.

INTRODUCTION

This section describes the background, objectives, contribution, results and implications of the research. For the results and implications are recommended (not mandatory).

PENDAHULUAN

Bagian ini berisi tentang latar belakang penelitian, tujuan penelitian, kontribusi penelitian, hasil dan implikasi penelitian. Untuk hasil dan implikasi bersifat anjuran (tidak wajib).

LITERATURE REVIEW AND HYPOTHESIS DEVELOPMENT (QUANTITATIVE) OR LITERATURE REVIEW AND FOCUS OF STUDY (QUALITATIVE)

This section contains the literature which referenced and associated to the study and hypothesis development (quantitative) or research question (qualitative). Highly recommended literature referenced is published at least in the last 10 years with the most important according to the order are: a reputed international journals, national journals accredited, national journals, international symposiums, national symposiums, textbooks, and daily reputed.

TINJAUAN LITERATUR DAN PENGEMBANGAN HIPOTESIS

Bagian ini memuat literatur-literatur yang diacu serta terkait dengan penelitian dan pengembangan hipotesis. Sangat dianjurkan literatur yang diacu adalah yang dipublikasi 10 tahun terakhir dengan yang paling utama menurut urutannya adalah: artikel dari jurnal internasional bereputasi, artikel dari jurnal nasional terakreditasi, artikel dari jurnal nasional, buku teks, dan harian yang bereputasi.

RESEARCH METHOD

This section contains at least the design of the study, subject/object/sample, the operational definition and measurement of variables, techniques/instruments of data collection, data analysis and hypothesis testing.

METODE PENELITIAN

Bagian ini setidaknya memuat rancangan atau desain penelitian, subjek/objek/ sampel penelitian, definisi operasional dan pengukuran variabel, teknik/instrumen pengumpulan data dan analisis data serta pengujian hipotesis.

RESULT AND DISCUSSION

This section contains characteristics data of the subject / object / samples / respondents research, data analysis, and hypothesis testing instruments (if any), the answers of the research questions, findings and findings interpretation.

HASIL DAN PEMBAHASAN

Bagian ini memuat data karakteristik subjek/objek/sampel/responden penelitian, hasil analisis data, pengujian instrumen dan hipotesis (jika ada), jawaban dari pertanyaan penelitian, temuan-temuan dan interpretasi temuan-temuan. Bagian ini, bila dimungkinkan, bisa dibuat grafik untuk setiap variable penelitian. Selanjutnya disajikan berturut-turut nilai statistik deskriptif (Misal; Mean, SD, Maximum, Minimum) beserta interpretasinya. Pada bagian akhir bagian ini menyajikan hasil uji hipotesis penelitian dan pembahasannya secara cukup.

CONCLUSION

Presenting a summary of findings, implications, limitations and research suggestions sequentially.

SIMPULAN

Menyajikan kesimpulan hasil, implikasi, keterbatasan dan saran penelitian secara berurutan.

Acknowledgment

This section is written if desirable. Listing gratitude and appreciation to those who significantly contribute in the completion of the study

UCAPAN TERIMA KASIH

Bagian ini hanya ditulis jika diinginkan. Memuat ucapan terima kasih dan penghargaan kepada pihak-pihak yang dinilai berkontribusi signifikan dalam penyelesaian penelitian.

REFERENCE

Contains the sources referred in the manuscript.

DAFTAR PUSTAKA

Memuat sumber-sumber yang diacu di dalam penulisan.

Publication Ethics

The publication of an article in a peer-reviewed journal reflects the work quality of its author(s) with his/her or their pertaining institution(s). Therefore, it is important for a peer-reviewed journal to have an ethical standard for all parties involved in the act of publishing: the author(s), the journal editors, the peer reviewers, and the publisher. Jurnal Medicoeticolegal dan Manajemen Rumah Sakit (JMMR) is committed to ensuring that advertising, reprint, and/or other commercial revenues have no impact nor influence editorial decisions. In addition, the JMMR will assist in communications with other journals and/or publishers should this be necessary to the editors.

Duties of the editors

The JMMR's editors are responsible for deciding as to which of the articles submitted should be reviewed and published. The validation of the work in question and its importance to researchers and readers must always drive such a decision. The editor-in-chief must seriously prevent libel, copyright infringement, and plagiarism. An editor should evaluate manuscripts for their intellectual contents without regard to race, gender, sexual orientation, religious belief, ethnic origin, citizenship, or political philosophy of the author(s).

Editors and any editorial staff must not disclose any information on a submitted manuscript to anyone other than the corresponding author(s), reviewers, potential reviewers, other editorial advisors, and the publisher, as appropriate. Unpublished materials disclosed in a submitted manuscript must not be used in an editor's own research without a written consent of the author(s). Privileged information or ideas obtained through a peer review must be kept confidential and not used for personal advantages.

Editors should recuse themselves from considering manuscripts in which they have conflicts of interest. Editors should require all contributors to disclose relevant competing interests and publish corrections if competing interests are revealed after publication. An editor should take reasonably responsive measures when ethical complaints have been presented concerning a submitted manuscript or published paper, in conjunction with the publisher (or

society). Every reported act of unethical publishing behavior must be looked into, even if it is discovered years after publication.

Duties of the reviewers

A peer review assists the editor-in-chief in making an editorial decision and editorial communications with the author(s). Any selected referee who feels unqualified to review research reported in a manuscript, or knows that its prompt review will be impossible, should notify the editor-in-chief and excuse himself/herself from the review process. Any manuscript received for review must be treated as a confidential document.

Reviews should be conducted objectively. Personal criticism of the author(s) is inappropriate. Referees should express their views clearly with supporting arguments. Any statement that an observation, derivation, or argument had been previously reported should be accompanied by relevant citations. A reviewer should also call to the editor-in-chief's attention any substantial similarity or overlap between the manuscript under consideration and any other published paper of which he/she has personal knowledge. Unpublished materials disclosed in a submitted manuscript must not be used in a reviewer's own research without an expressed written consent of the author(s). Privileged information or ideas obtained through a peer review must be kept confidential and not utilized for personal advantages. Reviewers should not consider manuscripts in which they have conflicts of interest.

Duties of the authors

Authors of a report of original research should present an accurate account of the work performed as well as objective discussion on its significance. Data and citations should be represented accurately in the paper. Fraudulent or knowingly inaccurate statements constitute unethical behavior and are unacceptable. Plagiarism takes many forms, from using another's paper as the author's own paper to copying or paraphrasing substantial parts of another's paper (without attribution), or claiming results from research conducted by others. Plagiarism in all its forms constitutes unethical publishing behavior and is intolerable.

An author should not in general publish a

manuscript describing essentially the same research in more than one journal or primary publication. Submitting the same manuscript to more than one journal concurrently constitutes unethical publishing behavior and is unacceptable. Information obtained privately, as in conversation, correspondence, or discussion with third parties, must not be used or reported without explicit, written permission from the source(s). Authorship should be limited to those who have made a significant contribution to the conception, design, execution, or interpretation of

the reported study, and seen and approved the final version of the paper and agreed to its submission for publication.

All authors should disclose in their manuscripts any financial or other substantive conflicts of interest. When an author discovers a significant error or inaccuracy in his/her own published work, it is the author's obligation to promptly notify the JMMR's editor-in-chief and cooperate with the editor to retract or correct the paper.

Reviewers Acknowledgement

All articles were published in Jurnal Medicoeticolegal dan Manajemen Rumah Sakit (JMMR) pass through review process from referees i.e. JMMR editorial team and expert reviewers from several universities. The members of the Editorial Team of JMMR extend

thanks and gratitude to all the referees who have contributed to the process of peer review of manuscripts since 2012. The support and professional assistance of the esteemed colleagues make the success of the journal possible.

Lampiran 8

Sekilas Biodata Penulis

Cahyo Kusumo Wijoyo, dilahirkan di Kendal, 17 Oktober 1986. Sebagai anak ketiga dari 3 bersaudara dari pasangan Bapak Soebiyanto Mantri dan Ibu Wahyu Susenorini. Penulis telah menikah dengan Ajeng Febry Hapsari pada tahun 2013 dan sekarang dikaruniai 2 orang anak yang bernama Adhisti Lareina Wijoyo dan Arkananta Elvano Wijoyo. Penulis sejak usia pendidikan Sekolah Dasar sudah dibentuk dan dituntut untuk menjadi pribadi yang santun, tegas, cerdas, mandiri dan agamis. Penulis pernah menempuh pendidikan di SD Negeri Pegulon 01 Kendal, dan melanjutkan ke jenjang SLTP di SMP Negeri 02

Kendal dan SLTA di SMA Negeri 01 Kendal. Gelar sarjana diperoleh Penulis dari Jurusan Ilmu Kedokteran, Fakultas Ilmu Kedokteran, Universitas Islam Sultan Agung (UNISSULA) Semarang. Penulis sejak duduk di bangku SD, telah aktif pada kegiatan-kegiatan sekolah khususnya kegiatan sosial dan pengabdian masyarakat. Sampai dengan kuliah berbagai jabatan pada unit kegiatan organisasi mahasiswa seperti: Staf Ahli Divisi Pengembangan Sumber Daya dan Organisasi (PSDMO) BEM Fakultas Kedokteran UNISSULA, Ketua Asisten Dosen Laboratorium Fisiologi Fakultas Kedokteran UNISSULA, Ketua Divisi Syiar dan Dakwah UKM Badan Amalan Islam (BAI) Fakultas Kedokteran UNISSULA, Ketua Dewan Sidang Forum Ukhluwah Lembaga Dakwah Fakultas Kedokteran Indonesia (FULDFKI), Ketua Dewan Sidang Ikatan Senat Mahasiswa Kedokteran Indonesia (ISMKI) Wilayah III dan Ketua Tim Dokter Relawan Bencana Letusan Gunung Berapi pernah dijalannya. Saat ini pun penulis tercatat sebagai salah satu anggota Esa Unggul Silaturahmi Mahasiswa dan Alumni (ESUMMI).

Penulis telah mengabdikan diri sebagai dokter selama kurang lebih 10 tahun dan memiliki riwayat bekerja di beberapa tempat pelayanan kesehatan, seperti: Klinik BTN Boyolali, Puskesmas Ngemplak Boyolali, Puskesmas Pembantu Donohudan Boyolali, Rumah Sakit Umum Daerah Banyudono Boyolali, Rumah Sakit Medistra Jakarta dan sekarang mengemban amanah sebagai Wakil Kepala Divisi Pelayanan Medis Rumah Sakit EMC Sentul Bogor. Kepeminatan yang tinggi akan manajemen dan penguatan kapasitas organisasi serta cita-citanya untuk selalu belajar mendorong Penulis melanjutkan pendidikannya ke jenjang pasca sarjana pada program studi Magister Manajemen di Fakultas Ekonomi dan Bisnis Universitas Esa Unggul dan telah menulis tugas akhir dengan Judul **“Pengaruh Kualitas Pelayanan dan Kepuasan Pelanggan dapat Meningkatkan Word of Mouth di Rumah Sakit EMC Sentul, Indonesia”**

Dengan mengucap syukur Alhamdulillah ke hadirat Allah SWT, Penulis mengharap agar tulisan/tugas akhir ini dapat memberikan manfaat bagi banyak pihak dan kontribusi positif pada bidang keilmuan, khususnya manajemen.
