	Examining the mediating role of employee engagement. <i>Pakistan Journal of Commerce Social Sciences</i> , 10(3), 708–724.	performa kerja secara tidak langsung dari pelatihan kerja terhadap performa kerja
Bataineh (2019)	Judul: Impact of work life balance, happiness at work, on employee performance. <i>International Business Research</i> , 12(2), 99-112.	<i>Work-life balance</i> terbukti mampu memberikan pengaruh positif terhadap meningkatnya performa kerja pada salah satu industri farmasi di Jordania
Soomro et al. (2018)	Judul: Relation of work life balance, work family conflict and family work conflict with the employee performance, moderating role of job satisfaction. <i>South Asian Journal of Business Studies</i> , 7(1), 129-146.	<i>Work-life balance</i> baik secara langsung atau tidak langsung melalui variabel kepuasan kerja mampu memberikan kontribusi positif kepada performa kerja karyawan
Wulandari (2017)	Judul: Influence of Education and Work Experience on Work Motivation and Job Performance at Branch Office of BANK J Trust Bank Surabaya <i>International Journal of Society Development and Engagement</i> , 1(1), 1-20	Pengalaman kerja terbukti mempengaruhi secara signifikan motivasi kerja dan performa kerja karyawan di salah satu bank swasta di Surabaya
Riyadi (2015)	Judul:	Pengalaman kerja

Nama Peneliti (Tahun)	Keterangan Jurnal	Hasil Penelitian
	Pengaruh Pengalaman Kerja Terhadap Kinerja Pada Toko Emas Semar Nganjuk Equilibrium, 3(1), 49-61	terbukti berkorelasi positif dengan kinerja karyawan

LAMPIRAN 2. OPERASIONALISASI VARIABEL

Operasionalisasi Variabel Budaya Organisasi (Robbins, 2015)			
No.	Original Dimensi	No.	Indikator Pernyataan
1	<i>Innovation and risk taking</i>	1	Di institusi saya, pimpinan mendorong agar saya melakukan inovasi didalam pekerjaan
2	<i>Leadership</i>	2	Di institusi saya, pimpinan menjelaskan target kerja dengan jelas
3	<i>Integrity</i>	3	Di institusi saya, setiap orang atau unit bekerja secara mandiri dan atau selalu berkordinasi satu dan yang lainnya dengan sama baiknya
4	<i>Management Support</i>	4	Saya selalu dapat mengandalkan atasan saya bila menemui hambatan atau masalah dalam pekerjaan saya
5	<i>Control</i>	5	Saya selalu diberikan kepercayaan penuh dalam setiap aktivitas pekerjaan yang saya lakukan
6	<i>Identity</i>	6	Saya merasa keberhasilan institusi adalah penting bagi saya
7	<i>Rewards System</i>	7	Di institusi saya penghargaan diberikan berdasarkan performa kerja setiap karyawan
8	<i>Compromise conflict</i>	8	Di institusi saya setiap masalah internal dapat diselesaikan dengan cara-cara yang efektif tanpa konfrontasi
9	<i>Communication patterns</i>	9	Di institusi saya, akan dengan mudah berkomunikasi dengan atasan atau rekan satu tim atau rekan dari bagian lain ketika saya menemui masalah terkait pekerjaan

Operasionalisasi Variabel <i>Employee Engagement</i> (Schaufeli et al., 2002)			
No.	Original Dimensi	No.	Indikator Pernyataan
1	<i>Vigour</i>	1	Saya selalu merasa bersemangat ketika bekerja
		2	Saya selalu memiliki keinginan yang tinggi dalam bekerja
2	<i>Dedication</i>	3	Pekerjaan yang saya lakukan selalu mampu memberi inspirasi pada saya
		4	Saya bangga terhadap pekerjaan yang saya lakukan

Operasionalisasi Variabel <i>Employee Engagement</i> (Schaufeli et al., 2002)			
No.	Original Dimensi	No.	Indikator Pernyataan
		5	Saya selalu antusias setiap kali akan memulai pekerjaan
3	<i>Absorption</i>	6	Saya sangat senang dengan pekerjaan yang saya lakukan
		7	Saya seringkali terbawa suasana ketika sedang bekerja
		8	Saya berinisiatif mendalami dan mengasah kemampuan untuk mendukung pekerjaan saya

Operasionalisasi Variabel <i>Work-Life Balance</i> (McDonald & Bradley, 2005)			
No.	Original Dimensi	No.	Indikator Pernyataan
1	<i>Time Balance</i>	1	Saya bekerja sesuai jam kerja yang ditentukan oleh institusi
		2	Saya memanfaatkan jam istirahat dengan sebaik-baiknya
2	<i>Balance of involvement</i>	3	Saya dapat menggunakan waktu diluar pekerjaan untuk membangun hubungan dengan keluarga
		4	Saya dapat menggunakan waktu diluar pekerjaan untuk membangun hubungan dengan aktivitas lainnya seperti hobi dan komunitas
		5	Saya memiliki sikap bertanggung jawab terhadap pekerjaan saya
3	<i>Balance of satisfaction</i>	6	Saya merasa puas dengan apa yang saya dapatkan dalam pekerjaan saya
		7	Saya merasa puas dengan apa yang saya rasakan dalam relasi saya dengan keluarga
		8	Saya merasa puas dengan relasi saya dengan aktivitas lain seperti hobi dan komunitas

Operasionalisasi Variabel Performa Kerja (Aguinis, 2009)			
No.	Original Dimensi	No.	Indikator Pernyataan
1	<i>Task Performance</i>	1	Kinerja saya selama ini telah berkontribusi terhadap kinerja institusi
		2	Saya telah menjalankan pekerjaan dengan baik sesuai dengan instruksi pimpinan
		3	Saya telah menjalankan pekerjaan dengan

Operasionalisasi Variabel Performa Kerja (Aguinis, 2009)			
No.	Original Dimensi	No.	Indikator Pernyataan
			baik sesuai dengan aturan dan tata tertib yang telah ditetapkan institusi
2	<i>Contextual Performance</i>	4	Saya bekerja keras agar seluruh tugas atau pekerjaan dapat selesai dengan baik
		5	Saya akan dengan sukarela bila mendapat tugas yang bukan merupakan tanggung jawab saya
		6	Saya bekerja dengan baik sebagai bentuk dukungan untuk mewujudkan visi dan misi institusi
		7	Dalam bekerja saya selalu mengikuti prosedur dan pedoman yang ditetapkan oleh institusi
		8	Saya merasa sangat antusias terhadap profesi saya sebagai seorang polisi

LAMPIRAN 3. KUESIONER PENELITIAN

Kepada Yth.

Bapak/Ibu Anggota Kepolisian Polres Kota Tangerang
Di Tempat

Dengan Hormat,

Bersama ini perkenalkan saya, Annas Rifa'i, Mahasiswa Program Magister Manajemen - Universitas Esa Unggul, memohon kesediaan Bapak/Ibu untuk meluangkan waktunya sekitar 10-15 menit untuk mengisi kuesioner yang akan saya gunakan sebagai bahan penelitian untuk menyelesaikan Tesis saya.

Penelitian saya adalah tentang Pengaruh Budaya Organisasi, Employee Engagement dan Work-Life Balance terhadap Performa Kerja Anggota Kepolisian Polres Kota Tangerang.

Kuisoner terdiri dari beberapa bagian, yang berisi kelompok pertanyaan yang mewakili beberapa variable, yakni :

1. Budaya Organisasi
2. Employee Engagement
3. Work-Life Balance
4. Performa Kerja

Perlu disampaikan bahwa penelitian ini dilakukan untuk kepentingan ilmiah, sebab itu sangat diharapkan agar Bapak/Ibu dapat menjawab kuesioner ini sesuai dengan kenyataan yang ada. Partisipasi Bapak/Ibu akan sangat membantu penyelesaian Tesis ini dan juga memberikan kontribusi bagi ilmu pengetahuan, khususnya yang berkaitan dengan Manajemen Sumber Daya Manusia di Indonesia.

Atas perhatian, bantuan serta dukungan Bapak/Ibu maka saya ucapkan banyak terima kasih.

Annas Rifa'i

ABSTRACT

This research was conducted to explore the influence of Organizational Culture, Employee Engagement and Work-Life Balance with Work Experience and Domicile Distance as moderating variables on the work performance of police officers at the Tangerang City Police. The contribution of this research is expected to enrich scientific studies, especially in the field of human resource management and managerial impact on efforts to improve the work performance of police personnel in Tangerang City. This research examines and analyzes the effect of each independent variable on the dependent variable using work experience and domicile distance as moderating variables. Respondents of this study were selected using purposive sampling method. This research is a quantitative study using the Structural Equation Model (SEM) method. The data was processed using SmartPLS software. The number of indicators in the questionnaire is 33 indicators and involves 165 respondents. The conclusion of this study is the partial positive influence of organizational culture and Employee Engagement on the work performance of police officers in Tangerang city. While the work-life balance variable is proven to have no effect on the work performance of police officers, the results of hypothesis testing on the influence of the moderating variable on the relationship between the independent and dependent variables also conclude that the moderating variable does not affect the relationship between each independent variable on the work performance of police personnel in Tangerang city.

Keywords: organizational culture, employee engagement, work-life balance, work experience, domicile distance, work performance

INTRODUCTION

The main key to the success of a business is the ability to maintain and improve organizational performance (Adam et al., 2020). Human resource performance is an important element in achieving organizational performance (Munir et al., 2019). In its development, the organization encounters various changes from the environment and is demanded to always meet the expectations of customers, therefore performance support is needed in the form of expertise from employees (Rahayu et al., 2018). Various factors have been shown to improve individual work performance in organizations. Research conducted by Uddin et al. (2012) who examined the impact of organizational culture on employee performance in the telecommunications industry concluded that organizational culture has an effect in determining employee performance. Various other studies were conducted and concluded similar things that organizational culture affects the work performance of individuals in organizations (Maswani et al., 2019; Vernadeth et al., 2020). Employees who are involved and feel that they are included in a series of tasks given by their superiors or the organization where they work can actually improve their work performance (Motyka, 2018). The results of the study concluded that with employee involvement it will stimulate work productivity which ultimately has an impact on work performance. Other studies that discuss the relationship between the two variables also support that there is a positive effect of employee engagement on work performance (Akhtar et al., 2016; Erwin et al., 2019). Apart from organizational culture and employee engagement, another variable that can influence and improve work performance is work life balance. Work life balance is a balance between aspects related to work and life of a person outside the workplace (Wardana et al., 2020; Pranindhita & Wibowo, 2020). In addition to the three independent variables, a moderating variable is needed, work experience and domicile distance to influence work performance. Work experience is a reference for an employee to be able to position himself appropriately, causes the birth of the courage to take risks, gives birth to the ability to continue to be responsible in the midst of any job risks and influences an employee to communicate while maintaining work performance (Octavianus & Adolfini, 2018). According to (Gibson et al., 2011) every individual who has work experience will be smarter in responding to various things in work than those who do not have work experience. Various studies have proven that work experience can improve work performance (Octavianus & Adolfini, 2018; Wulandari, 2017). Another variable as a moderator is domicile distance, various studies have proven there is a link between domicile distance and work performance (Pribudi, 2017; Talli et al., 2019).

The research was conducted by taking objects on the performance or work performance of the Tangerang City Police. Every year the Tangerang City Police

are faced with various criminal cases. Based on data from the Tangerang City Police, the number of criminal acts in 2019 increased by 6%. The number of criminal acts that occur in provinces or cities cannot be separated from how education is provided by the police, another thing is that the firmness of the police in taking action and processing every criminal case will certainly have a deterrent effect and become a kind of warning system for every citizen who attempted or intended to commit a criminal act. Another indicator of the decline in the performance of the Tangerang City Police is based on the disclosure and settlement of criminal acts until the case file is declared complete by the prosecutor's office (P21) and completed on time. Based on data on the number of acts of action, there was a decrease in the percentage of prosecution, in 2018 the percentage of action was 91,952%, while in 2019 the percentage of prosecution decreased to 87,632%. Based on the predicate of community satisfaction with the service performance of the Tangerang City Police from 2018 to 2019. In the last two years the predicate of citizen satisfaction with the services provided by the Tangerang City Police is still in the B predicate. This predicate places the Tangerang City Police still outside the Integrity Zone. From the disciplinary factor, in 2019 there was an increase in the number of disciplines by 41 actions, compared to 24 cases in 2018. This study aims to examine and analyze the influence of organizational culture variables, employee engagement and work-life balance partially and see the influence of moderating variables. on the relationship between the three independent variables on the work performance or performance of police officers in the city of Tangerang.

LITERATURE REVIEW

Culture can be defined as a system that contains general values that serve as a reference for a group of people to have the same perception of a value in the community, even though they come from diverse backgrounds (Robbins & Sanghi, 2007). According to Singh et al. (2012) organizational norms and values have a strong influence on everyone in the organization. He also added that organizational culture is something that is not visible, but it can improve performance and profitability if it is managed properly. Nidhi et al. (2012) added that organizational culture consists of a set of beliefs, assumptions, norms and values that have been accepted or distributed to all employees in the organization. Companies with an effective organizational culture will be able to increase productivity, employee engagement and ultimately have an impact on company profitability (Block, 2005). Organizational culture is measured using nine dimensions, namely innovation and risk taking, leadership, integrity, management support, control, identity, rewards system, compromise with conflict, and communication patterns (Robbins, 2015).

Employee engagement is a condition in which an employee is involved and committed to the job and where he / she works in return for the benefits given fairly (Schaufeli, 2013). Robinson et al. (2004) define employee engagement as a positive attitude that employees have towards the organization and the values held by the organization. An employee who has a spirit of involvement will be fully aware of the business context and will work both personally and with colleagues as well as possible to improve performance for the benefit of the organization (Dajani, 2015). Organizations must strive to build and foster engagement which of course requires interaction and participation from leaders and employees. According to Markos & Sridevi (2010) employee engagement is the desire and ability of employees to support all company work programs in order to successfully achieve predetermined targets. Employee engagement is measured using three dimensions, namely vigor, dedication and absorption (Schaufeli et al., 2002). The terminology of work-life balance was first known as work-family balance used in England in the late 1970s which describes how a worker must maintain harmony between work life and family life, as scientific developments demand an expansion of the scope of life of workers outside offices that are not limited to families, then the term changes to work-life balance (Pradhan et al., 2016). Work-life balance is a condition where a person can balance the demands of work and family needs (Schermerhorn et al., 2005). Singh & Khanna (2011) describe work-life balance as a concept in maintaining priorities between work (career and ambition) and life (family, spiritual development, happiness and leisure). The work-life balance variable is measured by three dimensions, namely time balance, balance of involvement and balance of satisfaction (McDonald & Bradley, 2005).

Work experience is the mastery of knowledge and skills that is measured based on the duration or length of time a person has worked, the level of knowledge and skills and expertise a person has (Gunawan et al., 2020). Work experience is an accumulation of knowledge, skills, and abilities that a person has in relation to his job in carrying out a job and the responsibilities of work that has been done before. Work experience is also a person's guide in choosing the right profession for him, people who have work experience will be more selective in choosing the right profession and field of work for him (Kaengke et al., 2018).

According to Pribudi (2017) the position or distance from where he lives is closely related to economic and work factors. Several dimensions run parallel to the mobility of the residence, one of which is location. There are five elements that need to be considered in relation to domicile, including comfort, density, access to facilities, social compatibility and care (Heimstra & McFarlins, 1974). Previous research has proven that there is no effect of domicile distance on work performance (Talli et al., 2019). However, other research has shown that there is a positive effect of domicile distance on work performance (Pribudi, 2017). Work performance or performance is the value of a person's behavior in the workplace

that affects organizational performance either negatively or positively (Colquitt et al., 2009). Performance is a measure of a person's success at the place he works (Hee & Kamaludin, 2016). Work performance shows how a person embodies what is his job description, through the work performance of an organization can make it a benchmark in providing rewards for employees who have a good contribution to support organizational work performance (Gunawan et al., 2020). Work performance is very important in realizing organizational goals, and must be done consistently and effectively (Mehmet, 2013). In an organizational context, a series of procedures can make work behavior more controllable and have an impact on individual performance (Janssen & Van Yperen, 2004). Work performance variables are measured using two dimensions, namely task performance and contextual performance (Aguinis, 2009).

METHODOLOGY

This study uses a survey method in obtaining data from respondents, the survey instrument used is a questionnaire and is distributed online. Each answer to the statement indicator is measured using an interval degree on a scale from 1 to 5 (1 = strongly disagree, 2 = disagree, 3 = neutral, 4 = agree, and 5 = strongly agree). Measurement of the Organizational Culture (X1) variable was adopted from Robbins (2015) consisting of 9 dimensions and produced 9 statement indicators. The Employee Engagement variable was adopted from Schaufeli et al. (2002) consists of 3 dimensions and 8 statement indicators. The Work-Life Balance variable adopted from McDonald & Bradley (2005) consists of 3 dimensions and 8 statement indicators. The work performance variable adopted from Aguinis (2009) consists of 2 dimensions and 8 statement indicators. The total measurement indicators are 33 statements, all indicators can be seen in the operationalization of the variables in attachment 2 and the questionnaire in attachment 3. Respondents were selected using purposive sampling method at the Tangerang City Police with the sample criteria were members of the police who had worked for at least three years. The minimum duration of 3 years is considered sufficient to see an understanding of the organizational culture of the institution.

The study began by distributing questionnaires to 30 respondents to test the quality of the data. The data quality test includes validity and reliability tests. The validity test was carried out with Kaiser-Meyer-Olkin (KMO) and Measure of Sampling Adequacy (MSA), the KMO and MSA values were more than 0.5, which means that the factor analysis was appropriate. Reliability test uses Cronbach's Alpha, the more Cronbach's Alpha value is close to 1, the better (Hair et al., 2018). This type of research is quantitative with the analysis method of Structural Equation Model (SEM), and data processing and analysis using the software SPSS 26 and SmartPLS. The determination of the number of research samples is a minimum of 5 times the number of statement indicators (Hair et al., 2018), so that the minimum sample size in this study is 165 people.

RESULT

Respondents in the study were 165 members of the Tangerang City Police. The results of the descriptive analysis show that based on the gender category, 32.12% female and 67.88% male, based on tenure, 0.61% of respondents have worked for less than 3 years, 3.64% of respondents have worked for more than 15 years, 22.42% of respondents have worked 10 to 15 years, 26.67% of respondents have worked 3 to less than 5 years and 46.67% of respondents have worked 5 to less than 10 years. Based on the domicile distance, 8.48% live less than 5 kilometers from the office, 0.61% live more than 20 kilometers, 47.27% live in 10 to less than 15 kilometers, 14.55% live in 15 to 20 kilometers and 29.09% live in 5 to less than 10 kilometers .

PLS analysis uses two measurement criteria, namely convergent validity and Reliability. The value of convergent validity is the value of the loading factor on the latent variable with its indicators. The value of convergent validity aims to determine the validity of a construct, the valid parameter is greater than 0.5. The results of the convergent validity test with SmartPLS show that all indicators have a loading factor value greater than 0.5. The smallest loading factor value in variable X1 is 0.633. The smallest loading factor value in the X2 variable is 0.700. The smallest loading factor value in the X3 variable is 0.735. The smallest loading factor value in variable Y is 0.732. The value of the reliability test uses three parameters, namely the Cronbach alpha coefficient, composite reliability and average variance extracted. Cronbach alpha reliability criteria and composite reliability is greater than 0.7. The reliable criterion for the average variance extracted is greater than 0.5. The results of the reliability test on the SmartPLS application show that all variables meet the reliability requirements. Cronbach alpha values for variable X1 are 0.894, X2 (0.889), X3 (0.906) and Y (0.921). The values of composite reliability (CR) are as follows: X1 (0.914), X2 (0.911), X3 (0.924) and Y (0.935). The average variance extracted (AVE) values are as follows X1 (0.544), X2 (0.563), X3 (0.602) and Y (0.645).

Based on the analysis of the hypothesis test with the path coefficient, it is found that the organizational culture and employee engagement have a significant effect on the work performance of police officers in Tangerang City, while the work-life balance variable has no effect on work performance. The two moderating variables, namely work experience and domicile distance, also have no effect on the relationship between the independent variable and the dependent variable. Based on the results of hypothesis testing, it is known that organizational culture and employee engagement are proven to have an effect on work performance, while work-life balance has no effect on the work performance of members of the Tangerang City Police. The results also showed that the two moderating variables of work experience and domicile distance did not affect the relationship between the independent and dependent variables.

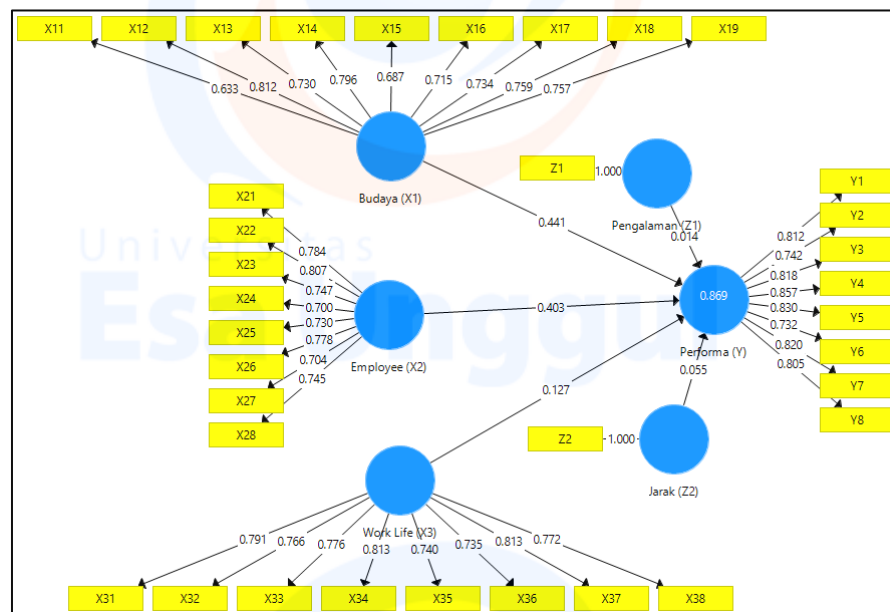

Figure 1. Full Model (PLS Algorithm)

Figure 1 shows the estimation coefficient which is depicted by the intact model (PLS Algorithm). The estimated coefficient of organizational culture on work performance is 0.441, this indicates that organizational culture has a positive effect on work performance. The estimation coefficient of the employee engagement variable on work performance is 0.403, this indicates that employee engagement has a positive effect on work performance.

DISCUSSION

The results of empirical research find that organizational culture has a positive and significant effect on work performance, this indicates that the H1a hypothesis which states that organizational culture has a positive effect on work performance is acceptable. A leader must be diligent in implementing an organizational culture, an effective organizational culture will have an impact on employee motivation and work performance. In the event that the police are a state institution that is tasked with enforcing the law and being a community player, a good organizational culture will shape the values and image of the police in the eyes of the community. The results of this study are in line with various previous studies that show organizational culture affects job performance (Awadh & Saad, 2013; Sevaliaa et al., 2013; Sinha et al., 2010). The results of the study concluded that the high organizational culture of a police officer will greatly support their work performance. Thus it can be concluded that there is a positive and significant influence between organizational culture on the work performance of the members of the Tangerang City Police.

The results of empirical research found that employee engagement has a positive and significant effect on work performance, this indicates that the H1b hypothesis

which states that employee engagement has a positive effect on work performance is acceptable. A member of the organization who is already engaged with the organization will give the best for the organization. Employees who have attachments will always be able to respond or respond to both the values and culture applied by the organization. The results of this study are in line with previous studies which concluded that employee engagement has an effect on work performance (Amoako-Asiedu & Obuobisa-Darko, 2017; Bedarkar & Pandita, 2014). The results of the study concluded that the high employee engagement of a police officer would greatly support their work performance. Thus it can be concluded that there is a positive and significant influence between employee engagement on the work performance of members of the Tangerang City Police.

The results of empirical research found that work-life balance has no effect on work performance, this indicates that the H1c hypothesis which states that work-life balance has a positive effect on work performance can be rejected. The results of the study contradict various previous studies that have been previously described (Bataineh, 2019). The results of this study are an indication that the workload that requires a member of the police to work far from family or not to meet family causes the need for a balance between work-related matters and things outside of work is not a primary or primary need of a member. police. The results of the study concluded that the high work-life balance of a police officer does not necessarily support their work performance. Thus, it can be concluded that there is no influence between work-life balance on the work performance of the members of the Tangerang City Police.

The results of empirical research found that all moderating variables did not affect the relationship between the independent and dependent variables. Work experience and domicile distance variables are not related to how the three variables, namely organizational culture, employee engagement and work-life balance affect performance. This shows that all hypotheses related to moderation variables can be rejected. The results of the study conclude contradictory findings with previous studies discussed previously. In the object of the Tangerang City Police members, an interesting fact was found that work experience and domicile distance did not partially affect the relationship between organizational culture, employee engagement and work-life balance on work performance. It is suspected that each level of rank within the police force has a workload that corresponds to its rank, and rank is closely related to work experience, so that the workload carried out by members of the police is generally in accordance with work experience, so that every given task can always be completed. well. Regarding domicile distance, it is assumed that generally every individual who wants and is accepted to join the police corps must have strong physical and mental criteria because the police serve as a community bomber, so that fatigue due to domicile distance is not experienced by members of the Tangerang City Police. Another thing is the potential that work experience and domicile distance have an effect on

work performance if they are placed as independent variables. The results of research related to the influence of work experience variables contradict various previous studies that have been previously described (Wulandari, 2017; Riyadi, 2015). The results of research related to the influence of the domicile distance variable are contrary to previous research conducted by Pribudi (2017) but are in line with the research of Talli et al. (2019) which states that domicile distance is not related to work performance. The results of the study concluded that work experience and domicile distance from a police officer had no effect on the relationship between organizational culture, employee engagement and work-life balance on work performance.

CONCLUSION

The results of the study proved that organizational culture and employee engagement had a positive and significant effect on the work performance of police officers at the Tangerang City Police. The research also proves that the work-life balance independent variable has no effect on the work performance of police officers at the Tangerang City Police. The two moderating variables studied, namely work experience and domicile distance, had no effect on the relationship between organizational culture, employee engagement and work-life balance on the work performance of police officers at the Tangerang City Police. The limitation in the research process is that the research is limited to the use of six variables, consisting of three independent variables, two moderating variables and one dependent variable. Another limitation is that the object under study is still limited to law enforcement officers, in this case the police, and specifically to members of the police on duty at the Tangerang City Police. In terms of research time, particularly data collection and surveys, data collection is limited from August to October 2020. Another limitation is that respondents were taken using a sampling of 165 police officers.

Suggestions for further research are to use other variables that have not been studied in this study to estimate an increase in work performance, such as organizational citizenship behavior Sevi (2010), work discipline (Elqadri et al., 2015), interpersonal communication (Nazari et al., 2012) and the work environment (Al-Omari & Okasheh, 2017) as well as various other factors for further investigation, because it is possible that other factors besides those in this study have a dominant influence in improving the work performance of the members of the Tangerang City Police. Future studies can use the variables studied in this study but are used on different human resource objects or institutions, so that later new studies will be found regarding the consistency of the variables studied in predicting the performance of human resources on different objects. Objects in the next research can use members of the police in other work units or can develop objects up to the provincial level of Banten.

The managerial implication of the research is that the work performance of police officers still needs to be continuously improved to support the growth and

development of the police institution to ensure excellent service to the community. Through the results of this study, there are several findings that can be used as a reference and managerial implications, including improving organizational culture, the results show that if organizational culture and employee engagement can be improved and synergized it will be able to have a positive and significant impact on increasing the work performance of members Tangerang City Police. However, considering that organizational culture is the most dominant variable in influencing work performance, the priority for improvement is more focused on organizational culture variables, namely in particular on the indicators of leaders explaining work targets clearly and superiors can always be relied upon when they encounter problems or obstacles in their work.

BEALL'S LIST OF POTENTIAL PREDATORY JOURNALS AND PUBLISHERS

PUBLISHERS · STANDALONE JOURNALS · VANITY PRESS · CONTACT · OTHER

international journal of research and review

Potential predatory scholarly open-access journals

Instructions: simply enter the journal's name or its URL in the search box above. If the journal has a publisher that was assessed to be predatory, then it is included on the [Publishers](#) list.

Original list

This is an archived version of the Beall's list – a list of potential predatory journals created by a librarian [Jeffrey Beall](#). We will only update links and add notes to this list.

Last updated January 9, 2017

Update

Here we include journals that were not originally on the Beall's list, but may be predatory.

Last updated November 18, 2020

Original description

This is a list of questionable, scholarly open-access standalone journals. For journals published by a publisher, please look for the publisher on the list of publishers, [here](#). This list is only for single, standalone journals.

We recommend that scholars read the available reviews, assessments and descriptions provided here, and then decide for themselves whether they want to submit articles, serve as editors or on editorial boards. In a few cases, non-open access journals whose practices match those of predatory journals have been added

LAMPIRAN 8. *AUTHOR GUIDELINE*

Instructions to Authors

1. Submission of manuscript:

- Authors are advised to submit manuscript in word file (Microsoft word doc) along with signed Copyright Form to the editor via e-mail (editor.ijrr@gmail.com, gkpublication2014@gmail.com).
- Accepted papers will be acknowledged and processed further.
- Acceptance or rejection of the manuscript would be decided after the decision of editorial team.

2. Preparation of Manuscript:

- Authors are requested to write name of journal and category of article (Original Research Article, Short Communication, Review Article, Case Report) under which they want to publish it.
- Authors should keep their manuscripts as short as they reasonably can (the total number of words should not exceed word limit as framed by the journal).
- Page number should appear in the lower right hand corner of each page, beginning with the title page.
- The language of manuscript must be simple and explicit.
- Author's / Co-author's name or any other identification should not appear anywhere in the body of the manuscript to facilitate blind review.

We accept manuscript under following categories:

- **Original Research Articles**
- **Short communications**
- **Review Articles**
- **Case report/study**

Word Limit

The manuscript should be within the word limit according to the category of article as mentioned below. This word limit does not include Abstract.

- Original Research Article: 8000
- Short Communication: 3000
- Review Article: 8000
- Case Report/Study: 3000

Research Areas

Research Papers and Articles may be from one of the following broad areas: Accountancy, Agriculture, Anthropology, Anatomy, Architecture, Arts, Biochemistry, Bioinformatics, Biology, Bioscience, Biostatistics, Biotechnology, Botany, Chemistry, Commerce, Computer Science, Dairy Technology, Dentistry, Ecology, Economics, Education, **Engineering**, Environmental Science, Fisheries Science, Food Nutrition, Forensic Science, Forestry, Geology, Geography, **Health Sciences**, History, Home Science, Journalism Mass Communication, Language, Law, Library Information Science, Life Science, Literature, **Management**, Marine Science, **Mathematics**, Medical Science, Microbiology, Pathology, Paramedical Science, Pharmacy, Philosophy, Physical Education, Physiotherapy, Physics, Political Science, Public Health, **Psychology**, Science, Social Science, Sociology, Sports Medicine, Statistics, Tourism, **Veterinary Science Animal Husbandry**, Yoga, Zoology etc.

Manuscript Instructions

Please communicate with us electronically and send your manuscript as an attachment in MS word. Don't send article in PDF format. Manuscripts should be prepared using font size 12, Times New Roman, and Styles- No Spacing; Page Layout: Margins (Normal- 1" from all sides), Size (A4- 8.27" '11.69") and aligned left. All pages should be numbered sequentially. Manuscripts should be written in good scientific language, nomenclature and standard international units should be used. Authors are requested to write category of article (Original Research Article, Short Communication, Review Article, Case Report) under which they want to publish it.

Originality: All articles submitted for publication in IJRR should be original material. The submission should have been made exclusively to IJRR and must not have been published or submitted for publication elsewhere. **The first author should certify to this effect.** Any author/s found to falsify or mislead the editors will be disqualified from future submissions to IJRR.

Original Research Article

Original Research Article should be submitted under following headings in one file.

- **Title**
- **Name of Authors** (write FULL NAME in sequence)
- **Affiliation Details** (Present working address with post), Email ID of all the authors.
- **ABSTRACT**
- **KEY WORDS**
- **INTRODUCTION**
- **MATERIALS AND METHODS**
- **Statistical Methods**

- **RESULT**
- **DISCUSSION**
- **CONCLUSION**
- **ACKNOWLEDGEMENT(if applicable)**
- **REFERENCES**

Title

The Title should be a brief phrase describing the contents of the paper. The Title Page should include the authors' full names and affiliations, the name of the corresponding author along with contact number and e-mail information. Present addresses of authors should appear as a footnote.

Abstract

The Abstract should be informative and completely self-explanatory, briefly present the topic, state the scope of the experiments, indicate significant data, and point out major findings and conclusions. The abstract should be upto 250 words in length. Complete sentences, active verbs, and the third person should be used, and the abstract should be written in the past tense. Standard nomenclature should be used and abbreviations should be avoided. No literature should be cited.

Key Words

Following the abstract, relevant key words that will provide indexing references should be listed.

Introduction

The Introduction should be concise and define the scope of the work in relation to other work done in the same field.

Materials and Methods

Materials and Methods should be complete enough and clearly describe the experiments and techniques used in the study. However, only truly new procedures should be described in detail; previously published procedures should be cited, and important modifications of published procedures should be mentioned briefly.

Statistical Methods

The details of statistical tests used and the level of significance should be stated. If more than one test is used it is important to indicate which groups and parameters have been subjected to which test.

Results

Results should be combined and presented with clarity and precision. The results should be written in the past tense when describing findings in the author(s)'s experiments. Previously published findings should be written in the present tense.

Discussion

The Discussion should interpret the findings in view of the results obtained in this and in past studies on this topic. This section should deal with the interpretation, rather than recapitulation of results. It is important to discuss the new and significant observations in the light of previous work. Discuss also the weaknesses or pitfalls in the study. New hypotheses or recommendations can be put forth. Avoid unqualified statements and conclusions not completely supported by the data. Repetition of information given under Introduction and Results should be avoided.

Conclusion

State the conclusions in a few sentences in lucid manner at the end of the paper. Conclusions must be drawn considering the strengths and weaknesses of the study.

Acknowledgement(s)

Author(s) may acknowledge the support obtained in the study. It should be typed in a new page. Acknowledge only persons who have contributed to the scientific content or provided technical support. Sources of financial support should be mentioned.

Tables

Tables should be kept as minimum as possible and placed at appropriate place in the text and be designed to be as simple as possible. Tables should be self-explanatory without reference to the text. The details of the methods used in the experiments should preferably be described in the legend instead of in the text. The same data should not be presented in both table and graph forms or repeated in the text. Tables should be prepared in Microsoft Word. Don't keep tables/figures at the end of article. All the tables/figures should be kept at appropriate place in the text of article where you have mentioned about these tables/figures. All the tables/figures should be mentioned in text of article.

Figure legends: Graphics should be prepared using applications capable of generating high resolution GIF, TIFF, JPEG or PowerPoint before pasting in the Microsoft Word manuscript file. Use Arabic numerals to designate figures and upper case letters for their parts (Figure 1). Figures can be attached as JPEG file.

References

The references may be cited in Vancouver style or Oxford style. Avoid citing abstracts as references. Each reference should be assigned a number, consecutively in the order of mention in the text. References are to be cited in the text by superscribed number and should be in the order in which they appear. The original number should be reused each time the same reference is cited in the text. The number should be placed in the text as superscript inside bracket and in **bold & blue color** like [1], outside the full-

stops and commas and inside colons and semi-colons. When multiple references are cited at a given place in the text, use a hyphen to join the first and last numbers that are inclusive and use commas to separate non-inclusive numbers (2-5,7,10).

For Vancouver style, reference numbers should be in increasing order like 1,2,3,4,5.... throughout the text of article starting from INTRODUCTION section. Don't write reference number in ABSTRACT. The list of references should be given at the end of the paper. If there are 3 or less authors, mention name of all the authors. Where there are more than 3 authors, use et al after the third author. References mentioned in text of article must be shown in REFERENCE section and vice-versa.

Examples:

All the references must be correct, complete and written in Vancouver style or Oxford Style. Write references in following style.

Citing a Book

Author(s) name. Title of book. Edition of book (if not the first edition). Place of Publication: Publisher Name; Year of Publication. Page No.

Example:

Dr. Sunil J Kulkarni, Mrs.Meera T. Sose, Dr. R. W. Gaikwad. Vermicomposting- A Boon for Solid Waste Treatment. Vadodara, India: Galore Knowledge Publication Pvt. Ltd.; 2019. p.20-28.

For Journal Articles:

Author(s) name. Title of article. Title of journal. Publication year; Volume (Issue): Page No.

Example:

Vora H, Parikh S, Patel N. Immunohistochemical characterisation of basal like phenotype of triple negative breast cancer from western India. International Journal of Research and Review. 2019; 6(10):1-8.

For Webpages:

Author. Title of publication [type of medium – Internet]. Place of publication (if available): Publisher (if available); Date of publication – year month day (supply year if month and day not available) [updated year month day; cited year month day]. Available from: web address.

Example:

Vora H, Parikh S, Patel N. Immunohistochemical characterisation of basal like phenotype of triple negative breast cancer from western India. International Journal of Research and Review. 2019; 6(10):1-8. Available from http://www.ijrrjournal.com/IJRR_Vol.6_Issue.10_Oct2019/IJRR001.pdf

For Reports and other Government Publications:

Author(s). Title of report. Place of publication: Publisher; Date of publication – year, month (if applicable). Total number of pages if applicable e.g. 24 p. Report No.: (if applicable)

Example:

Ahmed SE, Mustafa E, AbdulRaheem EM. Assessment of plasma levels of fasting blood glucose, triglycerides, total cholesterol, and HbA1c in patients with type 2 diabetes mellitus. Mumbai: New Era Publisher; 2014. 24p. Report No.: GHI224

For Conference Papers

Author(s) name. Title of Paper. In: Editor (s) name or Organization name. Title of conference; Date of conference; Place of conference. Place of publication: Publisher's name; Year of publication. p. Page numbers.

Example:

Ahmed SE, Mustafa E, AbdulRaheem EM. Assessment of plasma levels of fasting blood glucose, triglycerides, total cholesterol, and HbA1c in patients with type 2 diabetes mellitus. In: Patel SS, Jacko AG. 10th International Conference on Health Informatics; 2001 Jan 4-6; Mumbai, India. New Era Publisher; 2001. p. 202-210.

Don't write qualifications of authors, hospitals' name, any star marks etc. in references.

Review process:

Papers will usually be acknowledged upon receipt. All scientific papers will be independently peer reviewed to determine the originality of research and the viability of publication. Anonymity of authors/institutions and referees to each other shall be maintained so that the review process remains uninfluenced. Reviewers' comments may be sent to authors when revisions to the paper are found necessary. Generally the review process shall be completed within 4-6 working days of submission. The editorial decision is final. The editorial board reserves the right to make revisions aimed at greater clarity or conformity of style.

General Instructions

Papers must be submitted with the understanding that they have not been published elsewhere (except in the form of an abstract or as part of a published lecture, review, or thesis) and are not currently under consideration by another journal. The Corresponding author is responsible for ensuring that the article's publication has been approved by all the other co-authors. It is also the authors' responsibility to ensure that the articles emanating from a particular institution are submitted with the approval of the necessary institution.

**LAMPIRAN 9. BUKTI PENGIRIMAN ARTIKEL
KE INTERNATIONAL JOURNAL OF RESEARCH AND REVIEW**

Editor IJRR
to me

Dec 4, 2020, 7:02 PM (3 days ago)

Dear Author,
Greetings!

We have received your manuscript for publication in [International Journal of Research and Review \(IJRR\) ijrrjournal.com](http://International Journal of Research and Review (IJRR) ijrrjournal.com). Kindly visit the journal's website ijrrjournal.com for details of this journal.

Please download [Copyright Form](#) from download section of our website (www.ijrrjournal.com) and sign it and send signed [Copyright Consent Form](#) (scan copy or image taken by mobile phone) as early as possible to proceed for review of your manuscript. Digital signature of authors is accepted. Write title of your article and category in Copyright form.

Manuscript without Affiliation details of all authors and signed Copyright/Consent form will not be processed for publication.

You will know status of your article after completion of review process.

[Click Here to download Copyright/Consent Form](#)

Please read [Frequently Asked Questions \(FAQs\)](#) written on the journal's website ijrrjournal.com for more details about the journal. You may click the following link to access FAQs.
<https://www.ijrrjournal.com/faqs.html>

Thanks & Regards,

Dr. Shankar G.

Editor, International Journal of Research and Review
