*Title : Overview Completeness of External Writing Cause In Supporting the Accuracy of Code Fracture in General Hospitals Koja Region Period July-December 2018*

*Code of external causes is very useful in cases of fractures caused by traffic accidents so that this report can be used as a report on traffic accident statistics to the police. Know the description of the complete writing of external causes of injury in support of the accuracy of fracture coding at the Koja Regional General Hospital. this study is a descriptive survey method, namely by giving a description and explaining the results obtained in full regarding the completeness of writing fracture cases and external causes. Of the 80 samples that were calculated completeness, the outside causes were obtained 70 medical records (87.5%) were complete and 10 medical records (12.5%) were incomplete. Of the 80 samples that calculated the accuracy of fracture coding due to traffic accidents and traffic accidents 12 medical records (15%) right and 58 medical records (72.5%) were incorrect and 10 medical records (10%) were not written outside causes . There are no SPOs related to the case of completing the writing of external causes and fracture coding. Factors that become obstacles in completing writing and the accuracy of external causes and fracture coding are the absence of an SPO that regulates the completeness of writing and the accuracy of external causes and fracture coding.*

*Keywords: Completeness of Writing of External Causes, Fractures, ICD-10*
