

ABSTRACT

Title : *Review of Filling Out Approval Form for Medical Action for Sectio Caesarea Surgery at Urip Sumoharjo Hospital in Bandar Lampung*

Name : Wiyono

Study Program : *D III Medical Record and health Information*

Indicator of a complete informed consent is the completeness of the name and signature by the doctor and the patient's family. An explanation of the time and type of action is equally important in filling out an informed consent sheet, as this can explain when and what medical actions were taken against the patient. Based on the results of observations, the authors see the number of incomplete consent sheets for action, especially for patients with Sectio Caesarea surgery, out of 56 Sectio Caesarea measures none of the consent sheets were filled in 100%. The purpose of this study was to determine the completeness of the filling out of the Approval Letter for the Medical Acts of Sectio Caesarean Patients at Urip Sumoharjo General Hospital. The research method used in this research is to use a cross sectional research methodology with descriptive analysis techniques with a qualitative approach. The results show that the lowest completeness rate is 57% and the highest reaches 70%. The incomplete filling is largely due to the clerk not checking the sheets after an explanation of the care measures to be given. The incompleteness of filling out the approval for medical action shows that it is incompatible with the Republic of Indonesia Ministerial Regulation No. 290 of 2008 concerning approval of medical measures which states a complete indicator of informed consent is the completeness of the name and signature by the doctor and patient's family. Information on the time and type of action is also important in filling out the informed consent sheet. In addition it must contain complete data so that patients, doctors and hospitals can prevent legal cases. With these results it is expected that the assembling section should return the informed consent form if the filling is incomplete and the officer in charge of the service section ensures that the informed consent form is complete.

Keywords : *Informed consent, Approval for Medical Care Action, Completeness, Section Cesarea*
