Title : Overview of the E-Puskesmas Registration System at the Cipayung District Health Center.

Name : Deswati Siburian

Study Program : D-III Medical Record and Health Information.

Medical records must be available when needed for patient care, so they need to be managed properly. At present the Cipayung sub-district health center still has a medical record that uses manual medical records.

The purpose of this study is to support the registration system using E-Puskesmas in the medical record unit at the Cipayung sub-district health center.

In this study the authors used a descriptive research method that is to use the situation objectively. The scope of the research was in the medical record unit of the subdistrict health center in July 2019. The technique of collecting data was through interviews with the interview guide instrument and observation with the observation sheet instrument.

From the results of the research the Cipayung District Health Center is a Puskesmas that has been accredited plenary. Indications of Puskesmas services can be reflected in the patient's presentation of the services provided. Technology certainly provides great benefits for human life. In accordance with the changing times, the application of computer-based systems has become an absolute necessity and can provide excellence so that it can be the highest priority.
