*Title : Overview of Inpatient Patient Reporting With SIMRS at RSAU dr. Esnawan Antariksa 2019*

*Hospital Management Information System, hereinafter abbreviated as SIMRS, is a communication information technology system that processes and integrates the entire flow of hospital services in the form of a network of coordination, reporting and administrative procedures to obtain information precisely and accurately, and is part of the health information system. The purpose of this study is to find out how the reporting takes place at RSAU Dr. Esnawan Antariksa. The research method used descriptive qualitative method, carried out to provide an overview of the reporting system with the SIMRS application and the manual reporting system at RSAU dr. Esnawan Space. The study was conducted from July 2019 to January 2020. Research results obtained from the implementation of the report showed the lack of each system, with the results showing differences in data between the manual reporting system and the SIMRS system.*

*Keywords: Implementation of reporting, SIMRS reporting.*
