Title: Review of the Implementation of the Family Numbering System at UPTD Puskesmas Subik North Lampung

The Community Health Center (Puskesmas) is a very important public health service facility in Indonesia and the technical implementing unit of the district / city office is responsible for carrying out health development in a work area. This scientific work aims to identify operational standard implementation of the Family Numbering system in UPTD Puskesmas Subik Utara Utara. The method used in this scientific work uses a descriptive method through a qualitative approach. The results obtained in the research of the numbering system at the Subik Puskesmas use the Family Folder System with use the first 3 digits of the Region code 1 digit front letter to KK, 1 digit dot, 3 digit first registration serial number, and 2 digit family member code. It is recommended to the relevant agencies to make a written permanent procedure regarding the implementation of medical record management as well as a written policy regarding the storage system in use and to redesign the design of a new medical record folder and the procurement of a color code so that it can facilitate officers in the search for medical records.

Keywords: System Implementation Review, Family Numbering
