FACTORS CONNECTED WITH MOTHER PARTICIPATION FOR
CONSIDERING BATITA TO POSYANDU IN VILLAGE CILAJA MAJASARI
DISTRICT PANDEGLANG BANTEN REGENCY IN 2017

Background: The percentage of weighing coverage (D / S) of posyandu in Cilaja sub-district in 2017 is still low at 33.6%.

Objective: To know the relationship of knowledge, cadre support, and support of community leaders to the participation of mothers to weigh toddlers to Posyandu in Kelurahan Cilaja.

Research Method: descriptive research using cross sectional research design. The sample is taken by means of calculation amounting to 70 people, the mothers who have toddlers aged 6-32 months. Chi Square test to find out the relationship between knowledge variables, cadre support, and support of community leaders on the participation of mothers.

Results: The statistical test showed 44.3% knowledge level of good mother, 72.9% of respondents never got support from cadres, and 70% of respondents ever got support from community leaders. Very significant relationship between knowledge and participation of mother ($p = 0,001$), very meaningful relation between support cadre with mother participation ($p = 0,000$), and very meaningful relation between support of public figure with participation of mother ($p = 0,000$).

Conclusion and Suggestion: To increase scope of weighing to Posyandu need to intensify counseling and motivation of officer to mother toddler.

Keywords: toddler mother, participation, posyandu
