ABSTRACT

Stroke is a neuro-logical emergency disease that occurs due to the sudden interruption of cerebral blood flow resulting in the death of brain nerve cells resulting in disabling motor and sensory function that affects the emergence of acupuncture or death. The purpose of this case study is the identification of nursing problems in each client with stroke infarction. In writing the final report of this case study the author uses descriptive method (with nursing process approach) and method of literature (with literature search). Nursing problems in patients with stroke of this infarction are cerebral tissue perfusion disorders, physical mobility impairment, verbal communication barrier, and integrity of skin disorders. Physical mobility barriers Handling can be done with ROM exercises on the extremities. From the results of the researchers expected Gatot Soebroto Hospital to provide nursing care stroke patients, especially exercise Range of motion (ROM) through the implementation in the room.
