Judul : Tinjauan Kebutuhan Tenaga Pendistribusian Berdasarkan
Beban Kerja Unit Rekam Medis Di Rumah Sakit Kusta Dr.
Sitanela Tangerang

Medical record distribution in Dr. Sitanela hospital of leprosy Tangerang is now still using manual technique and distributing only with the help of container and 1 staff only. Distributing medical record outpatient with average 200 person per day and 20 medical record inpatient per day affecting the quality of service and causing medical record build up on the table of distribution. Based on the problem that found on Medical Record Installation in Dr. Sitanela hospital of leprosy Tangerang researcher do some calculation on the amount of need for distribution staff. General research objective are for get on overview of amount that staff in the Medical Record Distribution section to be matched with the workload in Dr. Sitanela hospital of leprosy Tangerang. Calculate the need for distribution staff by using the WISN method (Workload Indicator Staff Need). The activity carried out by the distribution officers at this time is to distribute medical records to the intended polyclinic. but distribution officers also distribute medical records to leprosy clinics whose distance reaches 30-50 minutes. Based on the results of the calculation of the need for distribution of medical records, it takes 3 (three) people. Need to add 2 (two) distribution staff at the Leprosy Hospital Dr. Sitanela prince
