Title : Review of Completion of Initial Assessment of Inpatient Nursing at Bhakti Mulia Hospital 2018

The initial assessment of inpatient nursing is part of the contents of the medical record that must be filled in completely and clearly. Completeness of filling in the initial study of nursing inpatient care at Bhakti Mulia Hospital is not complete so it makes hospital quality indicators not maximal. The data analyzed is the initial inpatient nursing assessment form for January 2018 period. This study was conducted using a systematic random sampling method / lottery sampling. Data analysis used is a quantitative analysis of the completeness of the contents of the medical record form. The purpose of this study was to identify the initial SOP for inpatient nursing care at Bhakti Mulia Hospital, to analyze quantitatively the initial inpatient nursing assessment form. Based on the results of the research, 105 medical records of the initial inpatient nursing assessment form obtained complete results of 93.24%. The initial nursing assessment SPO is not yet available. It is recommended to make the SPO fill out the inpatient nursing study form. Socialize the health personnel, especially to the nurses so that they always fill out all the medical record forms in the initial assessment of inpatient nursing.
