Title : Relationships of unsafe behavior with events work accident at construction worker PT Multikon Citra Lake Suites Apartment Project Year 2018

Based on data from 2017 - February 2018, there were 35 cases of work accidents among them terpleset, hit by sharp objects, head hit heavy objects, fell from the height, feet stuck nails. Then in can also data nearmiss 7 cases, data unsafe act as many as 57 cases. This research was conducted by using quantitative method and using cross sectional approach with sample of 61 workers. The result of the research is known 57,4% of workers looked good organizing and 42,6% worker looked at bad organization. 54.1% of workers viewed unsafe supervision and 45.9% of workers viewed safe supervision. Workers say 52.5% of unsafe conditions and workers say 47.5% safe conditions. 50.8% of workers behaved unsafe and 49.2% of workers behaved safely. Based on statistical test that there is relationship of unsafe behavior to work accident (pvalue = 0,024). Researchers suggest that companies in preparing a work schedule should consider the things that can affect the ongoing work. Improving the implementation of the supervision of workers in the field, increasing the motivation of workers by applying rewards and implementing safety talk every will start the work, holding recreation together on a regular basis so that workers are not saturated and repair replacing work aids that have been damaged.
