

## ABSTRACT

**Name** : Danang Ardi Fatchurrachman  
**Study Program** : Kesehatan Masyarakat  
**Title** : Analisis Hasil *Safety Inspection* Di PT Adhi Karya (Persero) Tbk. Proyek Renovasi Stadion Utama Gelora Bung Karno Dalam Rangka Pengendalian Resiko Tahun 2018

Risk Control of Occupational Health and Safety (OHS) safety inspection inspection is one of the efforts to assess whether the workplace is safe, so that any potential hazards can be identified to determine the priority actions to be taken. International Safety Rating System (ISRS) is a tool that is used to improve OHS performance. With a rating system in each sub-element, this ISRS becomes a tool that is often used to obtain certification in the OHS management system.

This research is to analyze the results of PT Adhi Karya (Persero) Tbk. Gelora Bung Karno main stadium renovation project in order to control risk in 2018.

This type of research is a qualitative descriptive study which aims to describe and analyze the results of the implementation of safety inspection activities based on ISRS assessment so that evaluation can be carried out for continuous improvement. The object of this research is HSE staff, MK staff, and workers in the renovation project of SUGBK.

The results of this study can be said to have not been fully implemented because there are still no assessment items that have been carried out. The company is advised to improve the competencies of its human resources and change the methods in the corrective actions carried out.

**Key Word**: Safety Inspection, ISRS (International Safety Rating System), Risk Control
