Penelitian ini merupakan penelitian kuantitatif eksperimen. Dimana data dependen yaitu gejala depresi, suasana hati dan vitalitas data independen yaitu konsumsi buah.

Penelitian ini dilakukan pemantauan konsumsi buah selama 14 hari. Pada penelitian ini terdapat 2 kelompok yaitu kelompok kontrol dan kelompok perlakuan. Kelompok kontrol adalah kelompok sampel yang mempertahankan pola makan sedangkan untuk kelompok perlakuan adalah kelompok sampel yang mendapatkan penambahan pemberian buah potong segar sebanyak 2 porsi/ hari selama 14 hari. Dengan waktu pemberian yaitu jam 10.00 WIB dan jam 16.00 WIB.

Terdapat data karakteristik terdiri dari umur, alamat, dan No Hp. Konsumsi buah dengan menggunakan kuesioner *Semi Quantitative Food Frequency Questionnaire (SQFFQ)* dan juga terdapat kuesioner gejala depresi, suasana hati dan vitalitas untuk mengukur kesehatan mental. Kuesioner tersebut diisi pada waktu malam hari menjelang tidur. Responden penelitian ini adalah remaja putri (santriwati) usia 15-18 tahun. Selama penelitian ini diharapkan responden tidak mengubah kebiasaan makan.

Manfaat secara umum dari penelitian ini adalah dapat mengetahui skor kesehatan mental dan perubahan yang terjadi dari efek pemberian buah terhadap skor kesehatan mental.

Responden memastikan tidak memiliki alergi terhadap buah yang diberikan dan tidak mempunyai penyakit asam lambung. Buah yang diberikan tidak terdapat penambahan zat apapun sehingga tidak menimbulkan dampak buruk pada responden.
