Title : The Related Factor Of Pregnant Mother's Anemia Care On The Third Trimester At Puskesmas Kecamatan Kebon Jeruk 2018

The number of monther's death in Indonesia on the SDKI survey in 2012 was 359 per 100,0000 of the live birth. In Indonesia, the first cause of mother death is as same as in internasional world, they are cause of hemorrhage, hypertension pregnant and infection. Hemorrhage takes the highest percentage of the death cause of monther in Indonesia (30,1%). Anemia care on the pregant monther is the first cause of hemorrhage and infection, which is the first factor of mother's death. When the third trimester starts, prenagent mother needs much nutrien to preapare the childbirth. The purpose this reseach is to know the factor which related to anemia case of the third trimester on prenant mother at Puskesmas Kecmatan Kebon Jeruk. This research uses *cross-sectional* design, with 79 samples of the third trimester. The taking sample uses simple *random sampling tehique* adn analyzed by using *chi square* test. The univariate result is found that most of the third trimester of prefnant mother have unrisky age (65.8%), the high education (64.4%),not consuming Fe tablet rountienly (57.0%), normal nutrition status (67, 1%), unrisky parity (83.5%), unrisk birth distance (83.5%), and anemia care (59.5%). There is a meaningful relation beetwen age, level educational,consuming Fe tablet, nutrition status, parity with anemia a case and there is no meaning relation between birth distance with anemia care.

Key Words: anemia case, the third trimester of pregant mother, Puskesmas
