Program Studi : Kesehatan Masyarakat  
Judul : Analisis Keberhasilan Program Pemberian Makanan Tambahan (PMT-P) di wilayah Puskesmas Kapuk tahun 2018 (Studi Kasus Posyandu RW 01 dan RW 04)

Penelitian ini bertujuan untuk menganalisa keberhasilan program pemberian makanan tambahan pemulihan di Puskesmas Kapuk melalui studi kasus di posyandu RW 01 dan RW 04. Penelitian ini menggunakan metode penelitian kualitatif dengan teknik pengambilan informan secara *purposive sampling*. Informan berjumlah 9 orang yang terdiri dari satu pemegang program, 4 kader posyandu dan 4 ibu dari balita penerima sasaran. Teknik pengambilan data menggunakan teknik wawancara mendalam dengan analisis secara deskriptif. Hasil penelitian menunjukkan bahwa pelaksanaan program belum berjalan maksimal. Dari empat tahap yang berpengaruh pada pelaksanaan program, terdapat tiga variabel yang belum sesuai, yaitu SDM di posyandu RW 04 sering berganti tanpa diikuti pelatihan yang cukup, serta adanya rangkap jabatan, lalu pelaksanaan meliputi pendistribusian yang tidak melibatkan kader, penyimpanan makanan tambahan digabung dengan penyimpanan arsip, serta konseling yang hanya dilakukan petugas kesehatan tanpa melibatkan kader. Kemudian pada pemantauan posyandu RW 04 tidak rutin melakukan posyandu dan terdapat satu balita yang berat badanya belum naik signifikan setelah mendapatkan PMT-P. Pada pencatatan dan pelaporan, ibu belum membuat catatan harian untuk mengetahui asupan makanan. Saran bagi instansi terkait, memperhatikan kualitas SDM di posyandu. Rutin melakukan penyuluhan, serta lebih aktif melibatkan kader dalam setiap kegiatan PMT-P.

## ABSTRACT

Name : Nurjanah  
Program Study : Public Health  
Title : Analysis of the Success of the Recovery Supplementary Feeding Program at Kapuk public Health Center at 2018 (Case Study in Maternal and Child Health Center of RW 01 and RW 04)

This study aims to analyze the success of recovery supplementary feeding program at Kapuk public health center through a case study in maternal and child health center of RW 01 and RW 04. This study uses qualitative study methods with informant sampling techniques by purposive sampling. The informants were nine people consisting of one program holder, four maternal and child health center cadres and four mothers from toddlers who received recovery supplementary feeding. The data retrieval technique using in-depth interview with descriptive analysis. The results of the study indicate that the implementation of this program was not running optimally. From four stages that affect the implementation of program, there are three variables that are not run optimally. Human resource of maternal and child center of RW 04 often changes without adequate training and also and double positions.

The implementation of distribution that does not involve cadres. supplementary feeding storage combined with archive storage and counseling by health workers only without involving cadres. Then in maternal and child center of RW 04 did not monitoring routinely. In stages of recording and reporting mothers from toddlers who received recovery supplementary feeding have not made a daily notes to find out food intake. Suggestions for public health center of Kapuk, to pay more attention to the quality of human resources at the maternal and child health center of RW 01 and RW 04. Routine to do supplementary feeding program extension and more actively involve cadres in every supplementary feeding program activity.
