Judul	: Gambaran Faktor Penyebab Pemanfaatan Pelayanan Kesehatan Balita di Posyandu Alamanda II Tanah Tinggi Kota Tangerang Tahun 2018

Pemanfaatan pelayanan kesehatan sangat penting bagi masyarakat untuk memelihara, meningkatkan, mencegah, dan menyembuhkan penyakit serta memulihkan kesehatan perseorangan atau keluarga di puskesmas, mencangkup pelayanan kedokteran (*medical services*) dan pelayanan kesehatan masyarakat (*public health service*), namun masih banyak ibu yang tidak memanfaatkan pelayanan posyandu. Penelitian ini dilakukan dengan tujuan untuk mengetahui faktor penyebab pemanfaatan pelayanan kesehatan balita oleh ibu rumah tangga di posyandu Alamanda II Tanah Tinggi Kota Tangerang tahun 2018. Jenis penelitian ini adalah kuantitatif dengan desain cross sectional. Untuk memperoleh data dilapangan dilakukan dengan cara wawancara dan observasi pada 40 responden. Hasil penelitian ini menunjukkan bahwa sebanyak 27 (67,5%) tidak memanfaatkan pelayanan kesehatan, sebanyak 25 (62,5%) ibu berumur muda,, sebanyak 26 (65,0%) ibu berpendidikan tinggi, sebanyak 27 (67,5%) ibu yang bekerja, sebanyak 27 (67,5%) ibu dengan pengetahuan baik, sebanyak 25 (62,5%) sikap ibu dengan kategori baik, sebanyak 24 (60,0%) peran kader dengan kategori baik , sebanyak 23 (57,5%) dukungan tokoh masyarakat dengan kategori baik. Disarankan agar para ibu lebih sadar dan peduli terhadap kesehatan balitanya dengan rutin membawa balita ke posyandu.

Title : Overview of the Causes of Utilization of Toddler Health Services in Alamanda II Posyandu in Tangerang City High Land in 2018

Utilization of health services is very important for the community to maintain, improve, prevent and cure diseases and restore the health of individuals or families in health centers, covering medical services and public health services, but there are still many mothers who do not use posyandu services. This research was conducted with the aim of finding out the causes of the utilization of toddler health services by housewives in the Alamanda II Posyandu Tanah Tinggi Kota Tangerang in 2018. This type of research is quantitative with a cross sectional design. To obtain data in the field carried out by means of interviews and observations on 40 respondents. The results of this study indicate that as many as 27 (67.5%) did not use health services, as many as 25 (62.5%) mothers were young, 26 (65.0%) mothers were highly educated, as many as 27 (67.5%) working mothers, as many as 27 (67.5%) mothers with good knowledge, as many as 25 (62.5%) mother attitudes with good categories, 24 (60.0%) cadre roles with good categories, 23 (57.5%) support from community leaders in good categories. It is recommended that mothers be more aware and concerned about the health of their children by routinely bringing toddlers to the posyandu.

Keywords: Utilization of health services Age, Education, Employment, Tightening, Attitude, Role of Cadres, Community Leaders.
