Title : Relationship between Knowledge Level and Safety Behavior Safe Driving for Class XII Students in Vocational Schools Angkasa 1 Sepatan Tangerang Regency in 2018

Safety Riding is riding a motorbike safety, in an orderly manner, and prioritizing safety which includes self-safety and the safety of other road users. This study was conducted to determine the relationship between knowledge and safe driving safety behavior in class XII students of Angkasa 1 Sepatan Vocational School, Tangerang Regency in 2018. The research sample was 74 students of class 1 of Angkasa 1 Sepatan Vocational School. This research was conducted with a quantitative method and used a cross sectional approach. Data retrieval is done by the total sampling method. Bivariate analysis was performed by chi-square test. Based on the results of the study, it was found that 56.8% of respondents had unsafe behavior and 43.2% of respondents had safe behavior. There is a relationship between knowledge and safety riding behavior. The researcher advised the school to work with the police to provide socialization to students of Angkasa 1 Sepatan Vocational School Tangerang Regency regarding safe riding safety in order to increase students' knowledge and behavior regarding safe driving safety (safety riding).
