

## ABSTRAK

Nama : Leny Rahmawati  
Program Studi : Kesehatan Masyarakat  
Judul : Faktor-Faktor yang Berhubungan dengan Pemanfaatan Posyandu Anggrek pada Masyarakat yang Memiliki Balita di RW 06, Puskesmas Kelurahan Joglo II, Kecamatan Kembangan Tahun 2019

Salah satu indikasi pemanfaatan posyandu adalah keaktifan kedatangan masyarakat keposyandu dilihat dari cakupan penimbangan balita (D/S). Berdasarkan data SKDN di Posyandu Anggrek cakupan penimbangan yang dilihat dari D/S pada bulan Januari tahun 2019 sekitar 59,49% (94 balita) dan bulan Februari sebesar 61,39% (97 balita) dan pada bulan Maret menjadi 62,65% (99 balita) namun target capaian Kementerian Kesehatan RI (2014) 85% belum tercapai. Penelitian menggunakan metode kuantitatif, desain *Cross Sectional* dan sampel sebanyak 106 balita. Menggunakan Uji *Chi-Square* untuk melihat apa saja faktor – faktor yang berhubungan dengan pemanfaatan Posyandu Anggrek pada masyarakat yang memiliki balita di RW 06 Puskesmas Kelurahan Joglo II, Kecamatan Kembangan tahun 2019. Data diperoleh melalui kuesioner dengan variabel pengetahuan, sikap, peran tenaga kesehatan, dukungan keluarga dan dukungan kader. Hasil menunjukkan tidak terdapat hubungan antara pengetahuan ( $P=0,435$ ,  $PR=1,581$ ) pemanfaatan posyandu. Hasil menunjukkan terdapat hubungan antara sikap ( $P=0,035$ ,  $PR=1,883$ ) pemanfaatan posyandu. Hasil menunjukkan tidak terdapat hubungan antara peran tenaga kesehatan ( $P=0,872$ ,  $PR=0,896$ ) pemanfaatan posyandu. Hasil menunjukkan terdapat hubungan antara dukungan keluarga ( $P=0,001$ ,  $PR=2,908$ ) pemanfaatan posyandu. Hasil menunjukkan tidak terdapat hubungan antara dukungan kader ( $P=0,335$ ,  $PR=1,381$ ) pemanfaatan posyandu. Saran yang diberikan agar kader membuat PMT yang bervariasi dan mensosialisasikan alur kegiatan, melakukan penyuluhan kepada keluarga dan memperpanjang waktu pelaksanaan posyandu.

## ABSTRACT

*Name* : Leny Rahmawati  
*Studi Program* : Public Health  
*Title* : *Factors Related to Posyandu Anggrek Utilization in Communities that Have Toddlers in RW 06, Joglo II Health Center, Kembangan District in 2019*

*One indication of the use of posyandu is the active arrival of the community of pesosyandu seen from the scope of weighing under five (D / S). Based on SKDN data at Posyandu Anggrek, the coverage coverage seen from D / S in January 2019 was around 59.49% (94 infants) and in February it was 61.39% (97 infants) and in March it was 62.65% ( 99 toddlers), but the achievement target of the Ministry of Health (2014) 85% has not been achieved. The study uses quantitative methods, cross sectional design and a sample of 106 toddlers. Using the Chi-Square Test to see what factors are associated with the use of Posyandu Anggrek in people who have children under five years old at RW 06 Joglo II Health Center, Kembangan District in 2019. Data were obtained through a questionnaire with the variables of knowledge, attitudes, the role of health workers, family support and cadre support. The results show that there is no relationship between knowledge ( $P = 0.435$ ,  $PR = 1.581$ ) using posyandu. The results show that there is a relationship between attitude ( $P = 0.035$ ,  $PR = 1.883$ ) using posyandu. The results showed no relationship between the role of health workers ( $P = 0.872$ ,  $PR = 0.896$ ) using posyandu. The results show that there is a relationship between family support ( $P = 0.001$ ,  $PR = 2.908$ ) using posyandu. The results showed no relationship between cadre support ( $P = 0.335$ ,  $PR = 1.381$ ) using posyandu. Suggestions are given for cadres to make a variety of PMTs and to socialize the flow of activities, to provide counseling to families and extend the time of posyandu.*
