Title : "Nursing Care for Patients with Human Immunodeficiency Virus / Aquired Immunodeficiency Syndrome with Giving Spiritual Therapy Emotional Freedom Technique in the Room Pavilion Darmawan 4th Floor, RSPAD Gatot Soebroto Hospital"

Human Immunodeficiency Virus/Aquired Immunodeficiency Syndrome is the most dangerous chronic disease now. It is undeniable that the Immunodeficiency Virus / Aquired Immunodeficiency Syndrome problem is not only a health problem, but also a problem and consequences on social, spiritual and psychological aspects. Purpose: to apply nursing care to Human Immunodeficiency Virus / Aquired Immunodeficiency Syndrome patients treated on the 4th floor of the pavilion in the Darmawan Hospital, Gatot Soebroto Hospital. The results of the diagnostic assessment that appeared on 3 clients: Anxiety: treated with SEFT therapy. Results and discussion: showed a reduction in anxiety after 30 minutes of spiritual freedom emotional therapy in 3 days of treatment. All patients said their anxiety was reduced and calmer. It was hoped that nurses would be able to apply the spiritual emotional freedom technique as a method of reducing non-pharmacological anxiety
