Title : Chronic Kidney Disease (CKD) ON HD Client Nursing Care  
Focus of Skin Care Intervention Using Aloe Vera Floor 6th  
Darmawan Pavilion, Gatot Soebroto Army Hospital in 2019

Chronic Kidney Disease (CKD) patients in the final stages that require long-term and permanent therapy with a glomerular filtration rate of less than 15ml / min, hyperkalemia, ureum levels of more than 200mg / dl, excess fluid, prolonged anuria more than 5 times indicated to undergo hemodialysis . One of the clinical manifestations of CKD On HD patients due to increased uremia is damage to skin integrity. This scientific paper aims to identify skin care methods using Aloe Vera on CKD ON HD clients on the 6th Floor of RS X. The author uses a case study method on 3 clients, in the form of comprehensive nursing care. The results showed a reduced humidity score in the first and second patients had a score of 6 included in the medium category and the third patient had a score of 4 which was included in the moderate category. Skin care methods using Aloe Vera are effective enough to treat dry skin on clients with Chronic Kidney Disease (CKD) ON HD. It is recommended that nurses are able to provide nursing care in the form of skin care experienced by clients with Chronic Kidney Disease (CKD) ON HD.
