"THE RESTRAIN ACTION TO SIGNS OF SIGNS, OTHERS AND ENVIRONMENTS ON PATIENS OF VIOLENT BEHAVIOR"

7 Chapter + 51 Pages + 14 Table + 3 Schemes + 8 Attachments

ABSTRACT

Almost 50% of patients treated in room Gaduh jitter mental hospital dr. Soeharto Heerdjan because of experiencing Violent Behavior. The purpose of this study was to determine the effect of restrain on the incidence of self-injury, other people and the environment in patients violent behavior in the Room Gaduh Uneasy Mental Hospital Dr. Soeharto Heerdjan Jakarta. This study uses the analytical descriptive concept with cross sectional approach, with the number of samples of 25 respondents. The results of the study were 7 to 11 respondents (28% - 36%) who had the risk of injuring themselves, others and the environment. The result of statistical test is obtained by p value = 0,079 - 0,400 which means there is no significant influence from the act of restrain against self-harm sign or others and the environment. The conclusion that can be taken is the influence of restrain actions against signs and symptoms of injury, environment has no significant effect.

Keywords : Violent behavior, Restrain, injury
