**Title** : *Relationship Knowledge, Attitudes, Actions Use of PPE Against Minor Work Accidents in the Workshop of PT. MPM Rent in 2019*

*Work accident is an undesirable and unexpected incident which can cause human and / or property casualties and minor work accident, namely work accident that needs treatment on that day and can do the job again or rest for less than 2 days. From the preliminary study, there were 29 people (72.5%) had experienced minor work accidents. The purpose of this study was to identify the Relationship between Knowledge, Attitudes, Actions to Use PPE Against Minor Work Accidents at the Workshop of PT. MPM Rent in 2019. This type of research is a quantitative analytic study with cross sectional design with 40 respondents selected using total sampling, then measurements are taken using a questionnaire and data collection is done through the study of accident statistical documents. The results of the study found that there was a relationship between knowledge of the use of PPE by 30 people (75.0%), p-value 0.040 and the attitude of using PPE by 26 people (65.0%), p-value 0.029 to minor work accidents and no relationship the use of PPE to work accidents with a p-value of 0.014. It is recommended for supervision and control from superiors to be tighter and the availability of PPE that makes it easier for workers.*
