

ABSTRACT

Title : *Design of Baby Chair Products with the Addition of Functions to Baby Strollers for Four Wheeled Private Vehicles*

Name : Wahyu Albin Tabrani

Study Program : *Product Design*

Family is the main place for someone to start his life. Families form a very close relationship between father, mother and child. This relationship occurs where family members interact with each other. These interactions make a togetherness and intimacy that is interwoven in the family, under normal conditions, the first environment that relates to children is their parents, siblings and perhaps close relatives who live at home. Children become important things that must be considered by the family in the life of the child need special attention from parents of the father and mother, this is because the family is the main place that receives children born into the world. Not only is the family a place for children to learn in life, from eating to children to learning in society. Family becomes important in bringing children to be good people. Baby strollers are vehicles that are driven by parents to carry babies, aged 6 months - 3 years, the weight of their babies is around 8-15 kg depending on the size, material and excess of the stroller. Baby carriages provide benefits, namely as a temporary baby bed, a place to carry baby's needs while traveling, as a baby seat full of toys, and instead of a temporary box. While in a car, the baby carriage can be changed to a baby seat and then installed in the back of the car. When outside the car, baby seats can be changed to baby strollers and then driven by parents or helpers.

Key words: Design, Baby Carriage, Baby Seats, Four Wheel Personal Vehicles.
