The purpose of this study is to provide empirical evidence regarding profitability, company size and environmental performance on disclosure of corporate social responsibility. The independent variable in this study is profitability measured using the ratio between earnings after tax and total equity or known as Return on Equity (ROE), company size is measured by the natural logarithm of total assets and environmental performance is measured by the PROPER rating (Company Performance Rating Assessment Program in Management Environment) by using color as an indicator of environmental performance. This study uses secondary data from annual financial statements listed on the Indonesia Stock Exchange. The population in this study are companies in the consumer goods industry sector which are listed on the Indonesia Stock Exchange during the 2015-2018 period, totaling 186 financial statement data. The sample used in this study were 64 financial statement data. The method used to determine the research sample is purposive sampling method. The results showed that profitability, company size and environmental performance simultaneously had an effect on corporate social responsibility disclosure, only company size partially had a significant effect on disclosure of corporate social responsibility, while profitability and environmental performance partially had no significant effect on corporate social responsibility disclosure.
