

ABSTRACT

Alumni data is an information system that can process data, provide data and information both web-based and mobile. In the world of education, especially schools, alumni data is needed for the progress of the school, thus encouraging school efficiency in terms of making school alumni books. Through the fact of the application of alumni books in the school realm, it is known that there are still many obstacles faced such as alumni data still in the form of paper and documents so that alumni find it difficult to find data about themselves, requires a long time and a large enough cost to make alumni books, there is no information systems that facilitate and lack of data or information obtained from alumni. Along with the development of increasingly modern technology today, digital book-based information systems are key that can be used to facilitate the school and alumni in accessing alumni books.

Keywords : Alumni Data, Alumni Books, Information Systems, Digital Book.
