**“ANALYSIS OF NURSING CARE IN CHILDREN WITH ACUTE
LIMPHOBLASTIC LEUKEMIA AT RSAB HARAPAN KITA”**

ABSTRACT

Acute lymphoblastic leukemia (LLA) is a type of blood cancer that occurs when white blood cells that are not yet mature (lymphoblasts) multiply rapidly and aggressively. This scientific paper aims to analyze nursing care in children with acute lymphoblastic leukemia (LLA) in orchid room RSAB Harapan Kita. Writing scientific papers using the case study method on 3 children, in the form of comprehensive nursing care. The results show that nursing care performed with a diagnosis of risk of damage to mucosal tissue integrity, risk of infection, and activity intolerance, is effective enough to overcome nursing problems that arise in children with acute lymphoblastic leukemia. It is recommended for nurses this analysis of nursing care makes the foundation in carrying out nursing care in children with acute lymphoblastic leukemia.
