

ABSTRAK

Judul	:	Pengaruh Pelaksanaan Triase Terhadap Kesehatan Kerja Tenaga Kesehatan Selama Pandemi COVID-19 di RSUD Kembangan
Nama	:	Kezia Irene Joseph
Program Studi	:	Ilmu Keperawatan

Corona Virus Disease atau juga disebut dengan COVID-19 telah menjadi masalah kesehatan global yang utama. Tenaga kesehatan merupakan salah satu kelompok paling rentan terpapar SARS-CoV-2, sehingga untuk melindungi kesehatan kerja dari tenaga kesehatan, triase selama pandemi COVID-19 dapat memainkan peran kunci. Rekomendasi pelaksanaan triase telah diterbitkan di Indonesia dan semua rumah sakit perlu menerapkan protokol tersebut, salah satu RS Pemerintah di wilayah Jakarta Barat yaitu RSUD Kembangan. Bukti lebih lanjut diperlukan untuk membuktikan bahwa triase memiliki pengaruh terhadap kesehatan kerja tenaga kesehatan selama pandemi COVID-19. Tujuan penelitian ini untuk mengidentifikasi pengaruh pelaksanaan triase terhadap kesehatan kerja tenaga kesehatan selama pandemi COVID-19 di RSUD Kembangan. Penelitian menggunakan desain asosiatif dengan metode *cross sectional*. Penelitian ini menggunakan teknik *total sampling* maka sampel yang digunakan dalam penelitian adalah keseluruhan populasi yaitu 27 orang tenaga kesehatan yang bekerja di area triase RSUD Kembangan. Instrumen yang digunakan dalam penelitian adalah kuesioner dan instrumen observasi. Uji validitas dan reliabilitas dilakukan di Puskesmas Kebon Jeruk dan ditemukan hasil valid dan reliabel. Penelitian ini menemukan kesimpulan bahwa ada pengaruh pelaksanaan triase terhadap kesehatan kerja tenaga kesehatan selama pandemi COVID-19 di RSUD Kembangan

ABSTRACT

Title : *The Effect of Triage Implementation on Occupational Health of Health Workers During the COVID-19 Pandemic at Kembangan Hospital*
Name : Kezia Irene Joseph
Study Program : Nursing

Corona Virus Disease or also known as COVID-19 has become a major global health problem. Health workers are one of the groups most vulnerable to being exposed to SARS-CoV-2, so to protect occupational health from health workers, triage during the COVID-19 pandemic can play a key role. Recommendations for triage implementation have been issued in Indonesia and all hospitals need to implement the protocol, one of the government hospitals in the West Jakarta area is RSUD Kembangan. Further evidence is needed to prove that triage has an impact on the occupational health of health workers during the COVID-19 pandemic. The purpose of this study was to identify the effect of triage implementation on the health of health workers during the COVID-19 pandemic at Kembangan Hospital. This study used an associative design with a cross sectional method. This study used a total sampling technique, so the sample used in the study was the entire population, namely 27 health workers who worked in the triage area of Kembangan Hospital. The instruments used in the study were questionnaires and observation instruments. Validity and reliability tests were carried out at the Kebon Jeruk Health Center and found valid and reliable results. This study found the conclusion that there was an effect of implementing triage on the health of health workers during the COVID-19 pandemic at Kembangan Hospital
