**ABSTRACT**

Morbus Hirschprung is a congenital abnormality in the intestines or (colon) is the presence of mechanical obstruction or blockage because of the infirm bowel movements in Indonesia, especially in RSPAD Gatot soebroto 1st floor Pavilium Ade Irna Suryani morbus disease Hirschsprung including the 10 greatest diseases congenital abnormalities, can be caused by several factors, including genetic factors, and the environment of writing this scientific work using case study method on 1 client , in the form of comprehensive nursing care. Research results obtained diagnose acute pain risk of fluid volume imbalance, less nutrient imbalance than body requirements and risk of infection. The results of the case study obtained almost all clients are children and also morbus Hirschsprung caused by non genetic factors. Hopefully, the medical personnel can provide guidance and counseling about the Morbus Hirschsprung and how to handle it
