ABSTRACT

This study have a purpose to determine the effect of Return on Assets, Earning Per Share, and Debt to Equity Ratio on stock returns in agriculture and infrastructure sub-sector companies listed on the Indonesian stock exchange 2013-2019 period. This study uses a sample of companies using purposive sampling method. The data used is secondary data, which is obtained from the website of the Indonesia Stock Exchange (BEI). The data obtained were then tested using panel data regression analysis. This study shows that Return on Assets has a negative effect on stock returns, Earning Per Share has a negative effect on stock returns, Debt to Equity Ratio has a positive effect on stock returns. Meanwhile, Return on Assets, Earning Per Share, and Debt to Equity Ratio simultaneously influence stock returns. This condition requires efforts to maximize the above variables on an ongoing basis so that the results of financial performance are as expected.
