

ABSTRAK

Judul : Literature Review : Tinjauan Aspek Keamana Dan Kerahasiaan Rekam Medis Di Ruang Filing

Nama : Winda Indri Anggraeni

Program Studi : DIII Rekam Medis Dan Informasi Kesehatan

Untuk menjaga keamanan dan kerahasiaan rekam medis pasien, diperlukan ruang penyimpanan rekam medis yang memenuhi ketentuan dalam menjaga keamanan dan kerahasiaan rekam medis. Ruang rekam medis dapat dikatakan baik apabila ruangan tersebut menjamin keamanan dan terhindar dari ancaman kehilangan, kelalaian, bencana dan segala sesuatu yang dapat membahayakan rekam medis tersebut. Penelitian ini bertujuan untuk mengetahui aspek keamanan dari segi fisik, kimiawi dan biologi serta aspek kerahasiaan rekam medis di ruang *filing*. Penelitian ini menggunakan metode *literature review* dengan *framework PICO*. Pencarian artikel menggunakan database *Google Scholar* dengan *Keyword* dan *Boolean* operator dalam penelitian ini adalah “keamanan” and “kerahasiaan rekam medis” and “*filing*”. Jurnal penelitian yang dipublikasikan pada tahun 2015–2020, berbahasa Indonesia, rancangan penelitian: menggunakan semua *design* penelitian. Hasil penelitian ditemukan keamanan dari aspek fisik yang paling sering ditemukan yaitu pemeliharaan kebersihan ruang filing yang kurang terjaga dan suhu kelembapan yang kurang optimal, aspek kimiawi yaitu masih ada petugas yang makan dan minum diruang filing, aspek biologi ditemukannya serangga dan binatang hama. Sedangkan dari aspek kerahasiaan yaitu masih terdapat petugas selain rekam medis yang masuk ke ruang filing.

Kata kunci : Keamanan dan Kerahasiaan, Rekam Medis, *Filing*

ABSTRACT

Title : Literature Review : Overview of Security and Confidentiality of Medical Records in Filing Room

Name : Winda Indri Anggraeni

Study : DIII Medical Record and Health Information

To maintain the security and confidentiality of patient medical records, a medical record storage room is required that meets the provisions in maintaining the security and confidentiality of medical records. The medical record room can be said to be good if the room guarantees security and avoids the threat of loss, negligence, disaster and everything that can endanger the medical record. This study aims to determine the security aspects in terms of physical, chemical and biological as well as the confidentiality aspects of medical records in the filing room. This study uses a literature review method with the PICO framework. Search articles using the Google Scholar database with keywords and Boolean operators in this study are "security" and "medical record confidentiality" and "filing". Research journal published in 2015–2020, in Indonesian, research design: using all research designs. The results of the study found security from the physical aspects that were most often found, namely the maintenance of the cleanliness of the filing room which was not maintained and the humidity temperature was less than optimal, the chemical aspect was that there were still officers eating and drinking in the filing room, the biological aspect of finding insects and pests. Meanwhile, from the aspect of confidentiality, there are officers other than medical records who enter the filing room.
