ABSTRACT

Futsal is the sport that many people like to play, especially in Indonesia, a lot of people play futsal to keep their healthy or just play for entertainment. Futsal is one of the most familiar sport in Indonesia, proven by existence futsal to be one of the extracurricular in elementary school until high school, even in university. A lot of university in Indonesia have futsal student club, also there is a lot of tournament will be held for futsal from elementary school level until student club in university, even tournament for professional player always held in Indonesia every season (year), that's why a lot of people in Indonesia play futsal. It's not just for become professional player that promising for the income, people in Indonesia usually play futsal just for fun with their colleague, usually they play in the middle of busy work just for refreshing also it can be reunion with old friends. In Indonesia there are a lot of futsal fields, and they have to booking futsal field before they play in the field that they choose. The system for booking futsal field in Indonesia is still using traditional system which is someone or a team who want to play futsal they have to come to futsal field just for booking. This system is not suitable for people in the present era. Nowadays with the development of the technology, most people using internet every time, internet can provide what people need. In this case, most people need to make their time more effective and efficient to do something, the traditional way is not effective these day. This paper describes the new system of booking futsal field. The new system is Web Based Online Booking Futsal Field. So, people don't need to go to the futsal field for booking the field, they just need open and access the application on web by using the internet. This application can make people's time more effective and efficient. The technology used for make people's time more effective and efficient to booking futsal field including PHP for programming language and also MySQL for database.
