Judul : Pengaruh Kelengkapan Pengisian Ringkasan Pulang Pasien Rawat Inap Terhadap Pemenuhan Standar Nasional Akreditasi Rumah Sakit (SNARS) Edisi 1.1 MIRM 15 Di RSUD Abepura

Kelengkapan ringkasan pulang pasien merupakan salah satu bagian dari rekam medis yang harus dipenuhi oleh rumah sakit untuk mendapatkan predikat akreditasi. Kelengkapan ringkasan pulang masuk pada standar MIRM 15 yang didalamnya terdapat 6 elemen penilaian. Penelitian ini dimaksudkan untuk mengetahui pengaruh kelengkapan ringkasan pulang pasien rawat inap terhadap pemenuhan SNARS Edisi 1.1 MIRM 15 di RSUD Abepura. Penelitian ini dilakukan di RSUD Abepura. Jenis penelitian yaitu kuantitatif dengan pendekatan analitik. Desain penelitian yang digunakan yaitu observasional dengan rancangan *cross sectional*. Populasi penelitian ini sebanyak 1110 dengan besar sampel sebanyak 294. Pengumpulan data dilakukan dengan lembar checklist. Teknik analisis data menggunakan uji regresi logistik. Hasil penelitian menjelaskan bahwa kelengkapan pengisian ringkasan pulang yang memuat elemen penilaian paling banyak yaitu EP 3 sebanyak 241 lembar atau 82% sedangkan yang tidak memuat yaitu EP 6 sebanyak 194 atau 66,1%, adapun pemenuhan skor MIRM 15 di RSUD Abepura yaitu 58% yang artinya dinyatakan tidak lulus, nilai signifikan sebesar 0,000 yang artinya $<0,05$, maka dapat disimpulkan terdapat pengaruh yang signifikan antara kelengkapan ringkasan pulang terhadap pemenuhan SNARS Edisi 1.1 MIRM 15.

Title : *The Effect of Completeness of Completion of Inpatient Discharge Summary on Compliance with National Hospital Accreditation Standards (SNARS) Edition 1.1 MIRM 15 at Abepura Hospital*

The completeness of the patient discharge summary is one part of the medical record that must be fulfilled by the hospital to get the accreditation predicate. The completeness of the round-trip summary on the MIRM 15 standard in which there are 6 assessment elements. This study was intended to determine the effect of completeness of inpatient discharge summary on compliance with SNARS Edition 1.1 MIRM 15 in Abepura Hospital. This research was conducted in Abepura Hospital. This type of research is quantitative with an analytical approach. The research design used was observational with a cross sectional design. The population of this study was 1110 with a sample size of 294. Data was collected using a checklist sheet. The data analysis technique used regression logistic analysis test. The results of the study explained that the completeness of filling out the discharge summary that contained the most assessment elements was EP 3 as many as 241 sheets or 82% while those that did not include EP 6 were 194 or 66.1% while the fulfillment of the MIRM 15 score at Abepura Hospital was 58%, which means declared not passed, a significant value of 0.000 which means <0.05 , it can be concluded that there is a significant effect between the completeness of the summary home to SNARS fulfillment Issue 1.1 MIRM 15.
