ABSTRAK

Perawat merupakan salah satu profesi yang rentan terkena stress kerja. Stress kerja yang dialami oleh perawat, disebabkan oleh tanggung jawab yang besar berkaitan dengan keselamatan nyawa pasien. Ada beberapa faktor yang mempengaruhi munculnya stress kerja pada perawat yaitu faktor lingkungan,faktor individu dan faktor pendukung. Penelitian ini bertujuan untuk mengetahui gambaran stres kerja pada perawat di ruang rawat inap Rumah Sakit Bunda Margonda Tahun 2022. Jenis penelitian yang digunakan yaitu kuantitatif dengan desain penelitian *cross sectional study*. Populasi perawat yaitu 50 perawat. Dan sampel yang digunakan sebanyak 50 perawat dengan teknik pengambilan sampel *total sampling*. Data analisis menggunakan analisis bivariat dengan hasil menunjukkan bahwa ada tingkat stres tinggi pada perawat, yaitu tingkat stres sedang 22 responden (44%) dan tingkat stres rendah yaitu stres ringan 1 responden (2%). Maka dari itu disarankan pengendalian stres kerja pada perawat. Yaitu perawat bekerjasama kepada managemen keperawatan dan bagian sdm untuk penambahan karyawan atau pelatihan kepemimpinan yang baik untuk meminimalisir stres kerja pada perawat dalam bidang pelayanan di rumah sakit.

ABSTRAK

Nurses are one of the professions that are susceptible to work stress. The work stress experienced by nurses is caused by a great responsibility related to the safety of the patient's life. There are several factors that influence the emergence of work stress on nurses, namely environmental factors, individual factors and supporting factors. This study aims to determine the description of work stress on nurses in the inpatient room at Bunda Margonda Hospital in 2022. The type of research used is quantitative with a cross sectional study design. The population of nurses is 50 nurses. And the sample used was 50 nurses with total sampling technique. Analyst data uses bivariate analysis with the results showing that there is a high level of stress on nurses, namely moderate stress level 22 respondents (44%) and low stress level, namely mild stress 1 respondent (2%). Therefore, it is recommended to control work stress on nurses. Namely nurses cooperate with nursing management and the HR department for additional employees

or good leadership training to minimize work stress on nurses in the field of service in hospitals.
