

## **ABSTRACT**

The objective to be achieved in this paper is "The impact of Export & Import toward BOP Growth in Era Free Trade Market".

Data collection methods use by research libraries. This research uses descriptive analysis, This type of research using secondary data. This data is obtained through the data from the Ministry of trade of the Republic of Indonesia.

This research it can be concluded that the import and export are the defining financial transactions of international trade. Indonesia's trade balance deficit due to a surplus of non oil and gas were not able to balance the deficit of the oil & gas, not to mention the needs of investors, in Indonesia for taking oil and gas rising, so to solve this then import capital goods can be suppressed through investment. So expect loads of imports will not grow and raise the non oil and gas surplus so that it is able to create a surplus for Indonesia trade balance

**Keywords:** Export & Import, and Free Trade Market
