

ABSTRACT

HANY RISQI LESTARI. 2015. "Effect of Personality Type (Extrovert and Introvert) against Aggression Behavior in Male Student at SMAN X Jakarta (Case Study Fighting)". (Guided by Yuli Asmi Rozali, M. Psi, Psi and Dra. Safitri M, M.Si)

Brawl is one form of aggressive behavior. Aggressive behavior can be influenced by personality, which personality is distinguished in two types, namely extrovert and introvert.

This research is non-experimental quantitative correlation. The research sample as many as 148 subjects. Sample collection technique is purposive sampling. Measuring tool in the form of a questionnaire using Likert scale. Test the validity of using a regression formula and reliability test using Cronbach alpha coefficient obtained by (0.926) on the type of personality and the aggressive behavior of (0.942).

The results were obtained value significance value of 0.001 ($p < 0.05$), meaning that there is a significant influence on behavior and personality type of aggression. Based on the beta value extroverted personality and introverted personality found that extroverted personality more influence on aggressive behavior than introverted personality. Crosstab results showed that adolescents extroverted tend to have a high aggressive behavior than teens introverted personality
