

ABSTRACT

This research aims to analyze the influences of Good Corporate Governance and CAMEL against the Profit Growth. Then, the profit growth as an intervening variable.

The researcher use sampling purposive technique to collect the research sample. The sample used is the companies have been go public within 2009 – 2014. The research data is quantitative data that obtained from the financial statement of banking corporation that registered at Indonesian Stock Exchange (BEI) .The researcher use path analysis to analyze the data by using SPSS 20.

The result of t examination shows that the Good Corporate Governance variable doesn't influence profit growth, but in the other hand the CAMEL influences profit growth. Then, the CAMEL variable also proven as an intervening variable. The result of this research expected would be guidance for investors determining investment strategy or internal management party to manage the company.
