**"NURSING CLIENT WITH CHRONIC KIDNEY DISEASE (CKD) IN TREATMENT
GENERAL CARE FLOOR 5 RSPAD GATOT SUBROTO JAKARTA"**

xviii + 5 chapter + 95 pages + 36 Table + 1 Attachment

ABSTRACT

CKD is a state of the occurrence of kidney damage or glomerular filtration rate (GFR) <60 mL / min within 3 months or more. Various clinical manifestations can be experienced by patients with CKD due to increased levels of urea in the blood, one of which is a gastrointestinal disorder nausea and vomiting. It takes the role of nurses as health care providers, educators, providers of nursing care, which in particular is as a reformer of nursing care providers to address nursing problems that occur in patients with CKD. The purpose of this case study is to identify nursing care for each patien with CKD in the general care floors RSPAD Gatot Soebroto 2015. In writing the final report of this case study the of literature (with the nursing proces approach) and the method of literature (with a literature search). Characteristics of patients who responded to the case study CKD disease anaverage age of 56-65 years. The majority of client classification Chronic Kidney Diesase stage V and are already undergoing hemodialysis. Obtained nursing problems on the client CKD is excess fluid volume, changes in breathing patterns, nutritional imbalance is less than the body needs, ineffective, activity intoleranceperipheral tissue perfusion. From the results of case studies I have found is client Chronic Kidney Disease (CKD) undergoing hemodialysis therapy commonly complain of nausea and vomiting. increasing the dregs of metabolic waste in the body that urea and creatinine circulating in the blood and can not get out of the body. Urea and increased kretainin can stimulate the production of stomach acid, resulting in complaints such as gastritis (gastritis), namely nausea and vomiting, estimated to occur in 70-90% of patients on hemodialysis. Chewing gum is one that can be given to the treatment of hemodialysis patients were nausea and vomiting. The results showed that there was an effect of aromatherapy pappermint nausea vomiting on the clients of Chronic Kidney Disease (CKD).: Suggested to the GatotSubroto Army Hospital to create SOP in the use of aromatherapy pappermint to treat nausea and vomiting of patients with CKD.
