Title   : Inventory Control Analysis of Antibiotics Drug in

                        Pharmacy Warehouse of RSUD Kota Tangerang, 2016

Inventory control of antibiotic drugs in Hospital Pharmacy Warehouse Kota Tangerang shows shortage of procurement with the balance between the use of drugs, so it is necessary to do the analysis of antibiotic drug inventory control in Tangerang City Hospital Pharmacy Warehouse.

This research is a qualitative research. Data collection obtained by depth interviews, observation and study of the document with a sample of 104 kinds. This study shows that antibiotic drug inventory control in Tangerang City Hospital Pharmacy Warehouse was not optimal.

It can be seen from from the lack of specific attention to the types of supplies of antibiotics with classification based on the usage and value of the investment. Determination of the number of procurement have not applied the calculation Reorder Point (ROP). Determination of minimum stock value was based on the assumption of the use and value. RSUD Kota Tangerang also does not have Operasioal Standard Procedures (SOP) are especially those regulating the process of drug supply control activities and has not implemented the training and study visits for employees Warehouse Pharmacy.

The author suggested should Pharmacy Warehouse control the supply of antibiotics by using the classification value of the use and value of investments to facilitate control of variations in the types of drugs, using calculations ROP to determine the limits of minimum stock to prevent a vacuum in drugs (stock out) and make the SOP on activities controlling drug supply and conduct training for officers Pharmacy Warehouse in order to improve the quality of employees so that the service can be met in a timely and appropriate.
