

- e. Alat ukur atau instrumen penelitian yang dapat diterima sesuai standart adalah alat alat ukur yang telah di uji validitas dan realibilitas data. Uji validitas dapat menggunakan rumus *Pearson Product Moment*, setelah itu di uji dengan menggunakan uji *t* dan lalu baru di lihat penafsiran dari indeks dan korelasinya

$$r_{\text{hitung}} = \frac{n(\Sigma xy) - (\Sigma x)(\Sigma y)}{\sqrt{[n.\Sigma x^2 - (\Sigma x)^2] \cdot [n.\Sigma y^2 - (\Sigma y)^2]}}$$

Keterangan

r_{hitung} : Koefisiensi Korelasi

ΣX_i : jumlah skor item

ΣY_i : jumlah skor total (item)

n : jumlah responden
