

ABSTRACT

Name : Nova Riza
Program Study : Public Health
Title : Management Evaluation of School Health Program
in SDN 003 Senapelan Pekanbaru

School-aged children are strategic targets for the implementation of health programs, in addition to large numbers, they are also easily accessible because they are well-organized. 2015, the coverage of primary schools conducting health screening for first graders in Riau Province was 82% and only increased 1% from the previous year that was 81%. Senapelan district is one of district in Pekanbaru city. Puskesmas Senapelan has 16 school in their targets UKS. SDN 003 Senapelan was include in that targets. The general purpose of this research is to know the evaluation of School Health Program (UKS) management at SDN 003 Senapelan Pekanbaru This research use that descriptive method with qualitative approach. Informants in this study were teachers who responsible to UKS from Puskesmas Senapelan, the principal, teacher and parent. Based on the result of the research, it is found that SDN 003 Senapelan did not have special planning for implementation UKS program it is indicate their did not have any document planning for UKS program. SDN 003 Senapelan did not have people on organization structure to conduct UKS program activities. The principal did not have reward and punishment system for the teacher. Supervision on UKS program activities at SDN 003 Senapelan Pekanbaru City was not implemented. Suggestion that SDN 003 Senapelan UKS program planning, organization structure, higher mobilization of Puskesmas, monitoring and evaluation UKS program conducted by puskesmas and The Principal.
