**Title** : *Eyestrain Analysis In Workers At Pt Argo Pantes Tbk Tangerang in 2017*

*Eyestrain is the eye and is caused by the use of the sense of vision. A worker at risk for eye contact is a worker in a finishing and bleaching dyeing unit. This objective was conducted to analyze the rabbit eyes of workers in the finishing and bleaching dye unit PT Argo Pantes Tbk Tangerang in 2017. This research was conducted to 84 respondents with cross-sectional study design. Data collection was done by interview using questionnaires to find workers who are suffering from eye. Workers in the finishing and bleaching dyeing section owned by. 46.6% while those that are not owned. Of the three independent variables There is a two-factor relationship that has a significant relationship with the long currency of work (p value 0.006), history of eye health problems (p value 0,000). Therefore, researchers make improvements to the environment. Households with cleaner and cleaner buildings. How to monitor or re-check the lighting conditions if they have been changed and cleaned. Then more strict supervision is made to ensure monitoring in the regions.*
